

Control technique

DOLD 

Product range

Safety technique

- Safety switching devices
- Standstill / speed monitoring
- Multifunctional safety devices
- Wireless Safety System
- Safety switches
- Guard locks
- Key transfer

Monitoring technique

- Residual current monitors
- Insulation monitors
- Insulation fault location system
- Measuring and monitoring relays
- Fault annunciators and fault annunciation systems
- SMS-Telecontrol module

Power electronics

- Solid-state relays /- contactors
- Reversing contactors
- Softstarters
- Motor brake relays
- Speed and phase controllers
- Multifunctional motor control units

Control technique

- Latching / interface / switching relays
- Interface modules
- Power supply units
- I / O modules
- CANopen PLC
- CANopen I / O modules

Time control technique

- Multifunction relays
- Flasher relays
- Cyclic timers
- Fleeting action relays
- Pulse extender
- Star delta timers
- Timers
 - on delayed
 - off delayed

Installation technique

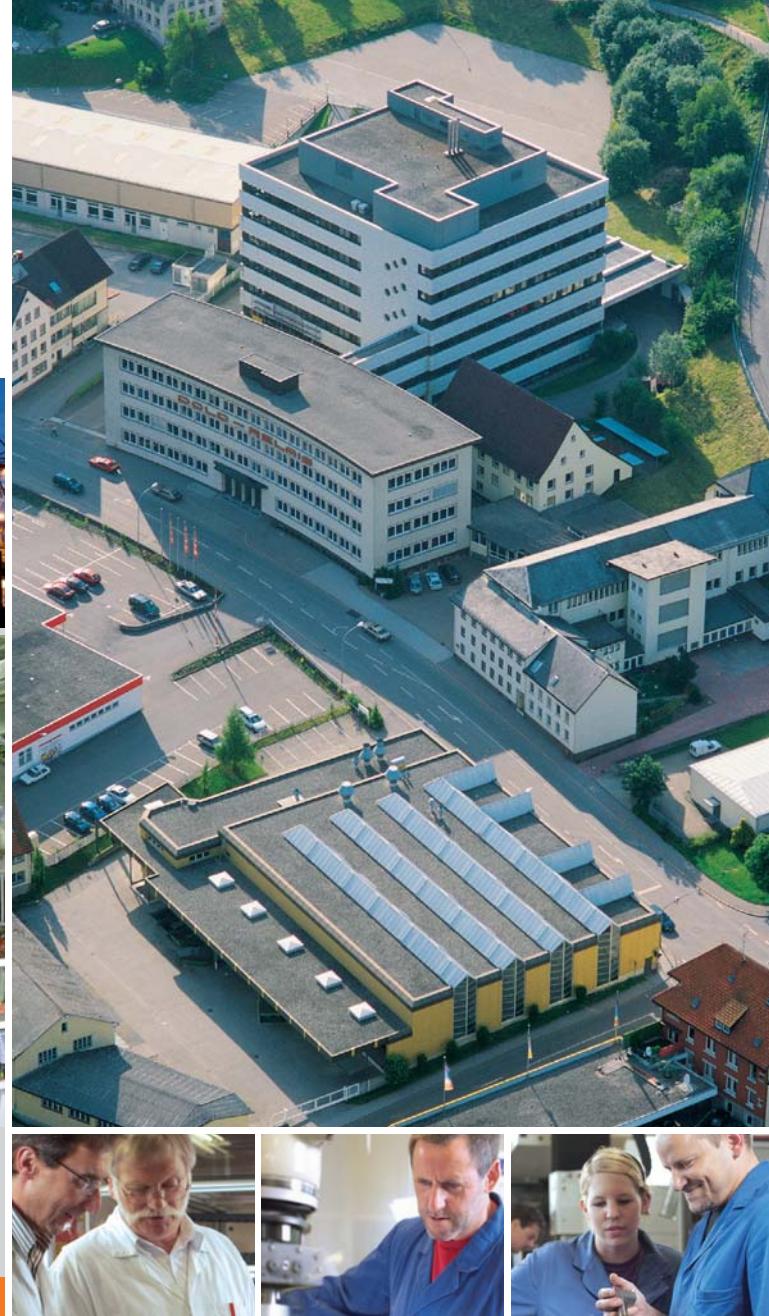

- Time switches
- Remote switches
- Specific installation electronics

- Machinery and plant
- Power generation/distribution
- Oil and gas industry
- Automation
- Transport and material handling systems
- Rail technology
- Aviation/marine industry
- Paper and printing industry
- Food industry
- Rubber/plastics industry
- Heating and refrigeration
- Automotive
- Mining/metallurgy
- Chemical/pharmaceutical applications
- Medical technology
- Water/waste water treatment
- Cable cars/ski lifts

... and wherever safety has high priority.
We can cover your industrial applications as well!

DOLD – Solutions for you

The DOLD philosophy, "Our experience. Your safety" constitutes our program: Offering solutions based on over 80 years of experience with a workforce of more than 400 employees, we manufacture high quality products using state-of-the-art production plant at our Furtwangen facility in Germany.

The comprehensive product range includes relay modules, safety relays with positively-driven contacts and electronic housings with virtually unparalleled production detail. The combination of know-how, innovation and experience makes us one of the leading worldwide manufacturers.

Apart from standard solutions, we are also the right partner when individual industrial solutions with that special touch are required.

Staying in close contact with our customers is very important to us. We listen, analyze and act by offering flexible, custom high-tech solutions, from a single source.

Thanks to our own development laboratory, highly automated production facilities with a modern tool & die shop in addition to injection moulding facility together with a well organized sales and marketing department, we guarantee high quality and short delivery times. Your benefits: Increased plant and machine availability, planning reliability and low production costs.

Interface relays

Connecting links between logic and load

Electronic control units have been inherent parts of advanced automation technology for a long time. Already in the early seventies, they superseded bit by bit contactor and relay control systems that were usual by then. With them, the power consumption of control systems working with extra-low voltage could be reduced to a minimum. However, the energy demand of the power level for driving motors, magnetic clutches or hydraulic cylinders has not changed up to now. They still need a high amount of electrical energy. Therefore, coupling relays undertake the required interface between logic and power levels. Moreover, they guarantee a protective separation. So, coupling relays are perfect connecting links between the highly sensitive logic level of a PLC, control system or process computer working almost without electric power and the rough machine operation.

Application

Inadvertent pulses on the input side of a control may cause false triggering or, if containing a larger amount of energy, serious damages to an electronic control system. On their output side, electronic control systems must be protected against short-circuits and reactions by inductive loads.

DOLD's coupling relays imod (input module) and omod (output module) meet the following criteria:

- Protective (electrical) separation according to VDE 0106 Part 101 between control and load circuits (e.g. between CPU and actuators or sensors)
- Highly effective interference suppression
- Signal conditioning

Therefore, DOLD coupling relays are suited for all interface applications in demanding control systems.

Solid-state coupling relays

The protective (electrical) separation in the solid-state coupling relays imod and omod is achieved by opto-couplers.

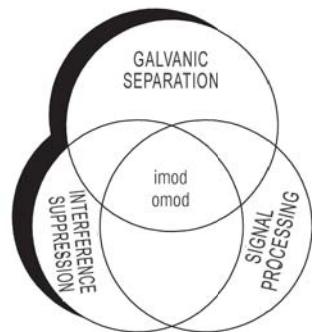

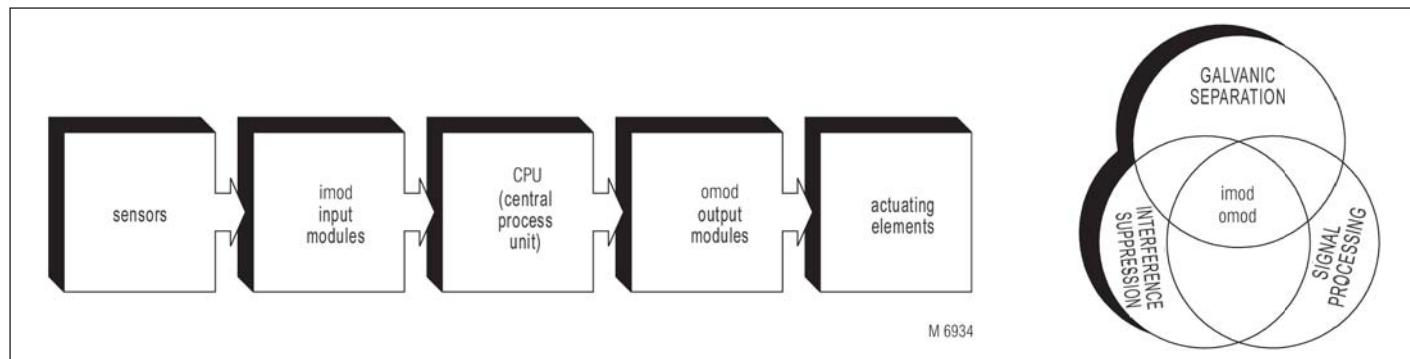

The signal entering the coupling signal is conditioned in several steps to obtain a suited low voltage signal for the operation of the actual switching element on the module's output. In doing so, interferences due to stray capacitances, as they occur in parallel running cables, as well as HF and transient interferences (short-time voltage peaks) are filtered out to a great extent. The conditioned signal is led to an opto-coupler. This consists of a luminescent diode (LED) and a phototransistor. They are used to electrically isolate the input from the output signal. Solid-state relays use a semiconductor output instead of the switching contact in electromechanical relays. This is a transistor for DC output modules, and triacs (bidirectional triode thyristors) are used for AC output modules. Their advantages include:

- Long service life
- Short switching times
- Bounce-free, noiseless switching
- Low trigger power

Electromechanical coupling relays

The electromechanical coupling relays imod and omod include a high-quality PCB relay with following features:

- Better output resistance characteristic than solid-state coupling relays
- Switch any d.c. and a.c. loads
- Switch analog values with lower voltage drop than solid-state coupling relays

Requirements and application fields for fieldbus systems

Control equipment in machines and installations becomes more and more complex. However, sensors and actuators are often conventionally wired. But with increasing complexity and performance also the time needed for engineering, installation, wiring, commissioning and maintenance increases. Such work becomes more confusing, error-prone and also more costly.

An alternative is the use of bus systems. Some advantages of fieldbus systems are listed below:

Advantages of fieldbus systems

- Wiring becomes **clearer** when actuators and sensors are wired to the control system via a fieldbus system.
- Compared to conventional wiring technology, the use of fieldbus technology ensures a **better flexibility** of systems with respect to modifications and extensions.
- Thanks to an **easy extensibility** of fieldbus-enabled components later modifications can be mostly realized more easily.
- The time and materials needed for engineering, installation, commissioning and maintenance of signal processing lines can be considerably reduced in many fields of industrial automation. In a study, **cost savings** up to 40 % were found for wiring, commissioning and maintenance with fieldbus-based solutions.
- **Reduction of installation time and lower error rate (no switch cabinets with thousands of signal lines) compared to conventional wiring.**
- Also the expenditure for engineering and documentation can be reduced with the use of appropriate engineering software tools.
- Control concepts realized by fieldbus systems can be easily incorporated in higher-level control systems (all information can be used and evaluated by several systems). Via so called gateways, it is also possible to pass on information to mobile networks or to transmit it to certain subscribers via the internet.
- **Remote diagnostics** is possible by transmission of different diagnostic information via only one line.

Advanced automation technology is characterized by evermore decentralization of processing and input/output functions via data communication systems. Today, the use of specific fieldbusses is state of the art for the implementation of systems for production automation, networking of control units in vehicles and for the installations in large buildings.

In the meantime, specific fieldbus solutions developed for the above applications have also found entrance into further application fields. In particular CAN with the CANopen and DeviceNet standards designed for industrial automation is widely used for the automation of systems and installations.

Fieldbuses and system overview

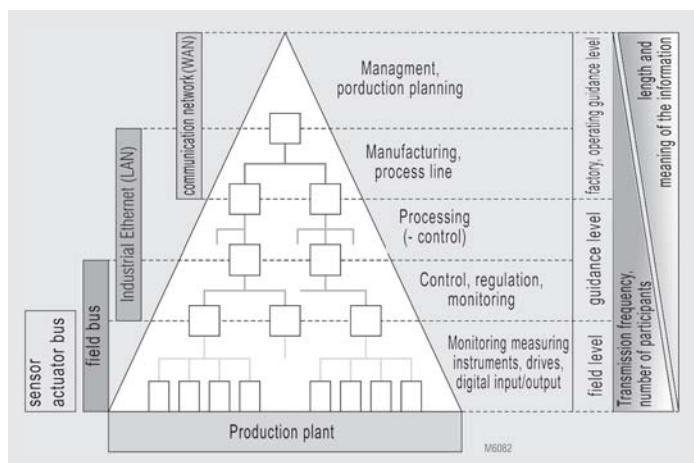

Today, users of communication systems in machinery and installations as well as automation systems can choose from many different fieldbus systems. To help in recognizing the advantages of a bus system for a specific application the following provides a rough classification and indicates the main applications of fieldbus systems.

As can be seen in the schematic representation in fig. 1, a factory and process automation system can be subdivided into different communication levels (network hierarchies). In the lowest level, the communication takes place between all components that can be found in a machine or installation and are involved in a task or process (acquisition, control and direct influencing of process variables). These are sensors and actuators with different complexity besides of control units (e.g. PLC, industrial PCs), display and indication devices, measuring instruments, controllers and drive systems.

This lowest level is also referred to as *Field level*. The next higher level is the *control level* where the control, regulation and monitoring of machinery and processes takes place. The highest level is the plant or factory control level where scheduling and management tasks are done.

These individual levels are networked via bus systems. So, it is also possible to exchange data between the hierachic levels. For example, data from a sensor in a machine can be passed on from level to level until it can be transmitted via the internet.

Fig. 1: Principle of industrial communication

The field level encompasses both highly complex devices (overriding control units) and also very simple cost-effective devices (e.g. binary sensors, actuators). Therefore, hierarchically structured application-specific communication systems become prevalent also in the field level. An example is the field of pure sensor-actuator interface connection (ASI bus).

The table below shows an overview of the different levels with their tasks. Requirements on the performance of a bus system depend on the different tasks.

A bus system in the field level (e.g. CANopen, Profibus-DP, etc.) must be able to quickly transmit small amounts of data from many bus devices, for example. A bus system in the plant control level (e.g. Ethernet) must be able to exchange relatively large amounts of data (some MB) between a smaller number of bus devices.

CANopen

DOLD offers devices for two-wire transmission that can be used in their basic function (plug & play) **without** programming tool. The following describes most simple easily implementable application examples.

Simple remote control

Using DOLD's input modules **IP 5502** and output modules **IP 5503** it is easily possible to transmit input signals to output relays over large distances via two-wire cables without programming (e.g. control of signal lamps, valves, ...). The structure and wiring of this "remote control" is very easy.

Signals from limit switches, pushbuttons, sensors, etc. of a plant can be connected to the digital input module, for example. Signals for a system to be controlled are connected to the digital output module, for example.

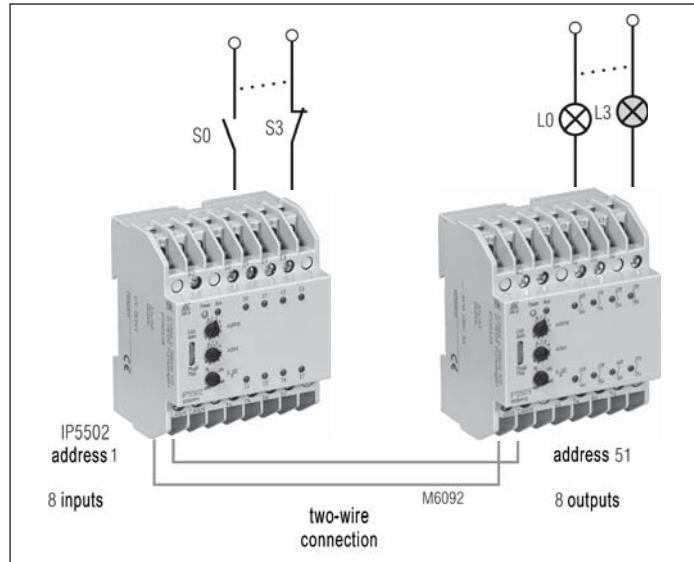

Fig. 2: Structure of a remote control via a two-wire connection (plug & play mode)

To start up a 2-wire remote control only following settings have to be made on the device:

Plug & play mode

For the example represented, the switch of the input/output modules has to be put to the "**Plug & Play**" position. In this switch position, a variant of the CANopen protocol is run via the existing interface.

Address setting for the plug & play mode

To enable the input module for communication with a corresponding device via the CAN bus an address according to the table has to be set using two rotating knobs on the front. Addresses from 1 ... 49 and 51 ... 99 can be set. In Plug & play mode, no module with the addresses 0 and 50 may be encountered.

Input module IP 5502 with address	transmits to	Output module IP 5503 with address
1	→	51
.		.
49	→	99

Setting example:
Upper rotating knob "ADR 10": to position 1
Lower rotating knob "ADR 1": to position 4

Commissioning

- 1.) Connect the CAN bus to the devices.
- 2.) For devices at the bus ends, the terminals CAN-H and R_{ab} must be bridged.
- 3.) Set the transmission speed (e.g. 20 kBit/s).
- 4.) Set the address.

Attention: To achieve a transmission in plug & play mode it must be ensured that one input module, e.g. IP 5502, with the address set to 1 is connected to the CAN bus.

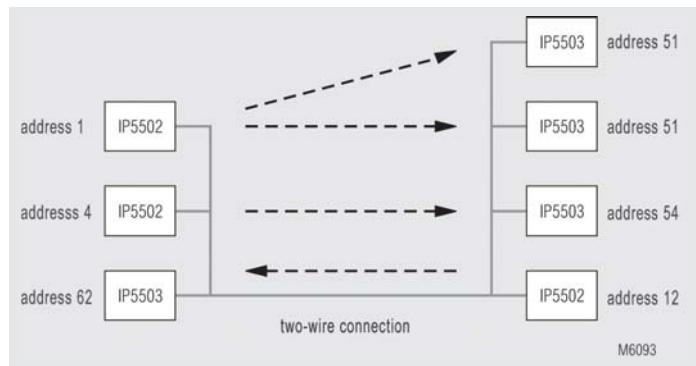

Fig. 3: Address setting example for the plug & play mode

Indication of an operated emergency stop pushbutton

Problem

In installations with many emergency stop command devices it is very time-consuming to locate an operated emergency stop pushbutton in order to restart the stopped plant.

Consequences

Expensive production downtime as each individual emergency stop pushbutton has to be checked.

Solution

Using DOLD's emergency stop monitor **BH 5922** the operating state of emergency stop pushbuttons in an emergency stop chain can be directly indicated. Up to eight emergency stop command devices and one emergency stop module **BG 5925** can be directly connected to the BH 5922. Using suited expansion devices, e.g. BG 5925, it is possible to connect almost any number of emergency stop pushbuttons. An operated pushbutton is then visually indicated by means of an associated LED.

It is possible to easily connect the **BH 5922** with an output module **IP 5503** in Plug and Play mode (2-wire line). So, the output relays in the IP 5503 represent the states of the emergency stop pushbuttons and the LEDs of the output module map the states of the status LEDs of the emergency stop monitor. Via the output module, the states of the emergency stop pushbuttons can also be indicated over large distances by indicator lamps that are remotely located - without large wiring expenditure.

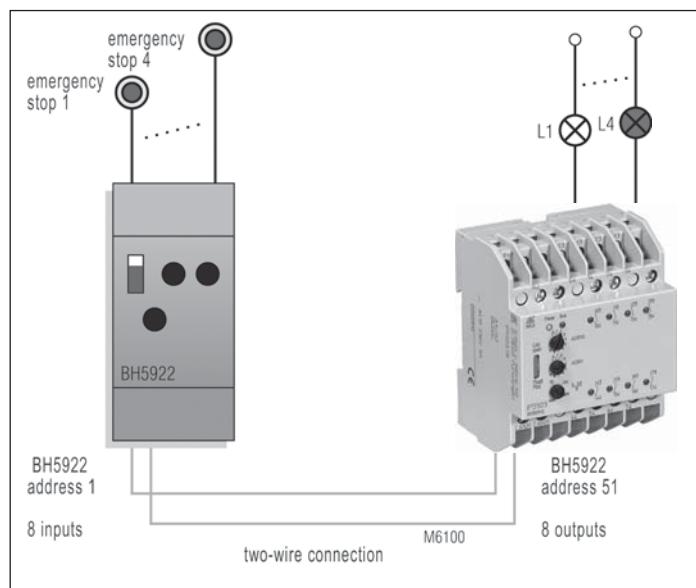

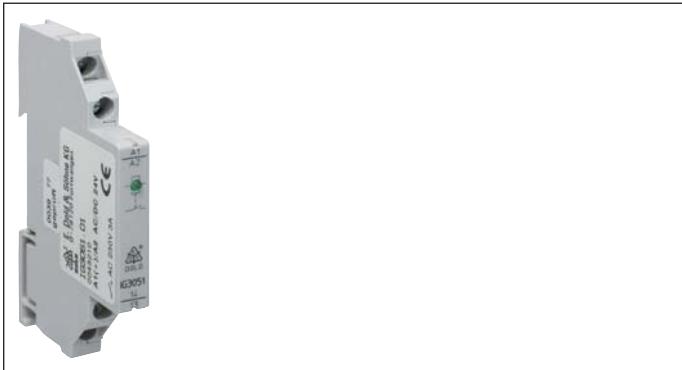

Fig. 4: Operating state of multiple emergency stop pushbuttons (Plug & Play mode)

Address setting and commissioning can be done as described in the example above. For detailed information see the attached data sheet.

Input-Output Interface Relay Interface Relay IG 3051

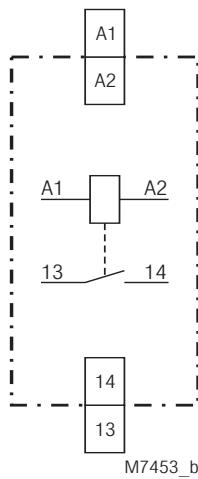

0222103

- According to IEC/EN 60 947-5-1
- Input for AC/DC 24 V, AC 110 V or 230 V, as required
- 1 NO contact for AC 230 V
- LED indicator
- Width 9 mm

Weight	15 g	17 g	17 g	15 g			

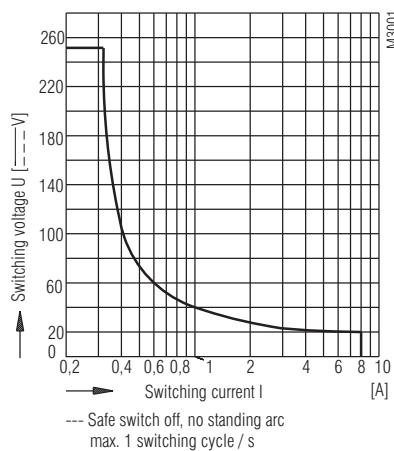

Characteristics

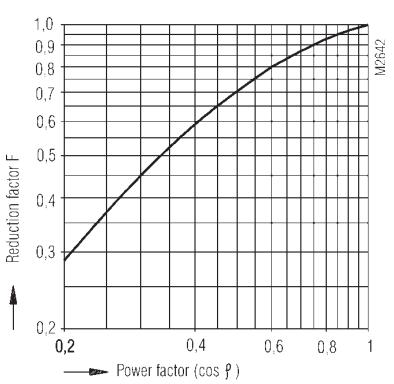

OA 5668: Operating voltage limit curve

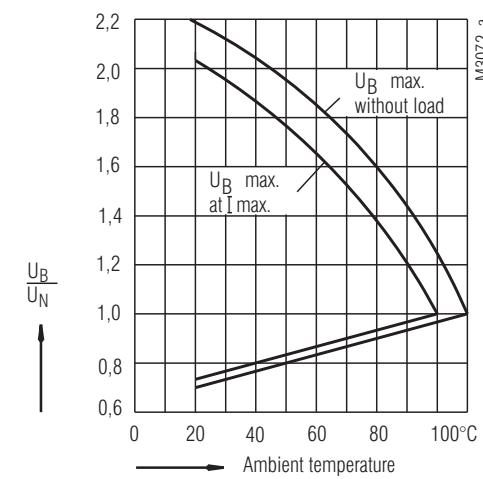

OA 5668: Contact service life (at $t_u = 20^\circ\text{C}$)

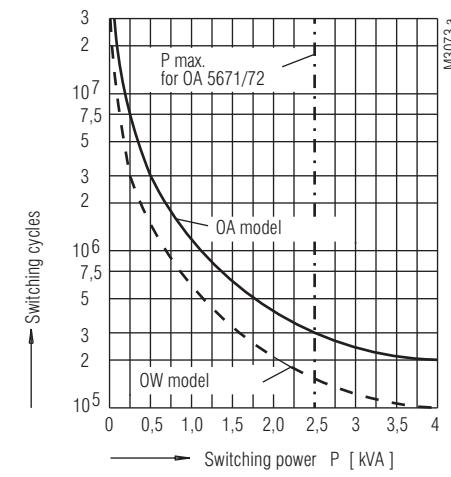

OA 5668: Limit curve for arc-free operation (at $t_u = 20^\circ\text{C}$)

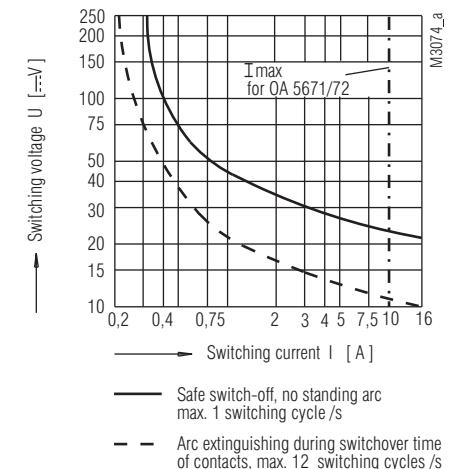

OA 5668, OA 5672, OB 5694:
Reduction factor for inductive loads

OA 5672, OA 5682: Operating voltage limit curve

OA 5672, OA 5682: Contact service life (at $t_u = 20^\circ\text{C}$)

OA 5672, OA 5682: Limit curve for arc-free operation (at $t_u = 20^\circ\text{C}$)

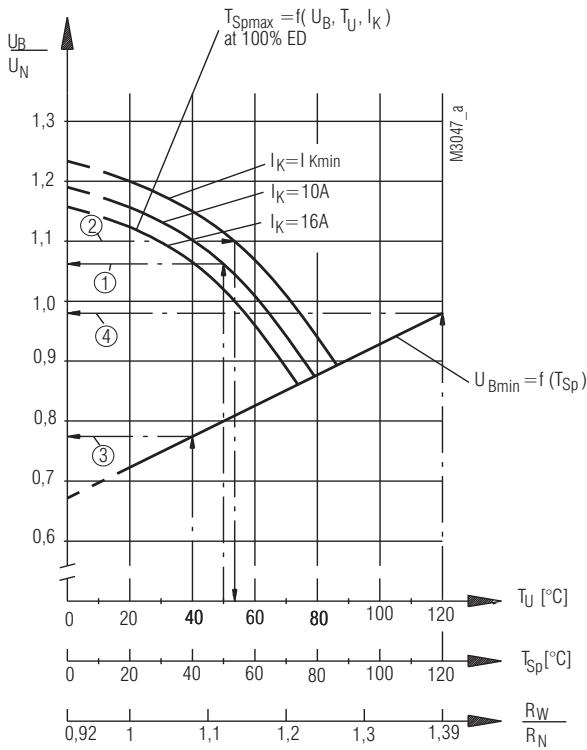

Characteristic is valid for:

- inductive load
- capacitive load

The actual number of cycles with reactive loads n_{blind} can be calculated as follows:

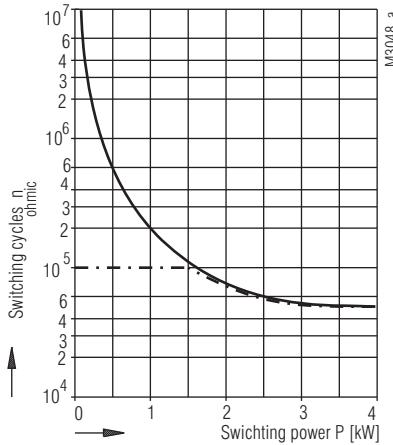

$$n_{\text{blind}} = n_{\text{ohmic}} \times F$$

Characteristics

I_K = continuous current
 R_W = resistance in hot state
 R_N = nominal coil resistance
 T_U = ambient temperature
 T_{Sp} = actual coil temperature
 U_B = operating voltage applied
 U_N = nominal voltage

OB 5694: Operating voltage limit curve

— DC-drive
 - - - AC-drive

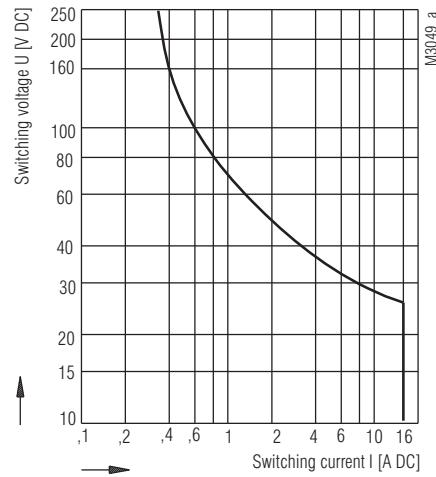

Comment
 Graph is valid for:
 - clear resistive load ($\cos \varphi = 1$)
 - AC 230V

OB 5694: Contact service life

Example:

* for max. voltage or max. coil resistance (at $t_e > 10\text{s} \dots 100\%$ ED)

- ① known: $T_U = 50^\circ\text{C}$, $I_K = 10\text{A}$
requested: U_{Bmax} ?
solution: $U_{Bmax} = 1.06 \times U_N$
- ② known: $I_K = I_{Kmin}$, $U_B = 1.1U_N$
requested: T_{Uzul} ?
solution: $T_{Uzul} = 53^\circ\text{C}$
- * for operating behaviour of the relay
- ③ known: relay "cold", i.e. $T_{Sp}=T_U$ [with $T_U = 40^\circ\text{C}$]
requested: U_{Bmin} ?
solution: $U_{Bmin} = 0.77 \times U_N$
- ④ known: Relais "hot", i.e. $T_{Sp} > T_U$ [with $T_{Sp} \rightarrow 120^\circ\text{C}$ but according to ① or ② T_U ca. 50°C]
requested: U_{Bmin} ?
solution: $U_{Bmin} = 0.98 \times U_N$

Contact distance $\geq 0.5\text{ mm}$
 Graphic only for resistive DC-loads

at max. 1 switching cycle / s
 - safe switch-off
 - no standing arc

At voltages $<$ DC 25 V
 max. 300 W can be switched.

OB 5694: Limit curve for arc-free operation (at $t_u = 20^\circ\text{C}$)

- Plug-in relay
- LED indicator
- 1 changeover contact or 1 changeover contact, 1 NO contact
- As option with MOV at the input to increase the peak voltage resistance
- As option with gold plated contacts to switch low loads
- As option with RC or diode contact protection
- Relay OA 5669 with forcibly guided contacts and 0.5 mm contact gap
- Width 17.5 mm

Circuit Diagrams

Approvals and Markings

Application

- Link between control and power system
- For galvanic separation

Function

The relay consists of one relay OA 5672, OA 5668 or OA 5669 and socket HC 3093. The plug-in design makes it very easy to change the relay. OA 5672 is used only on socket HC 3093.11/3_ and OA 5668 or OA 5669 only on socket HC 3093.20/3_.

Indication

LED: on, when control voltage applied

Characteristics

Interface Relay IK 3050

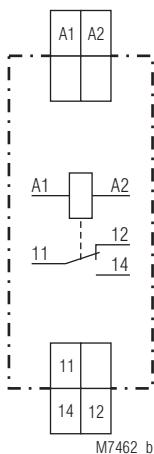

0273677

Product Description

The interface relay IK 3051 is designed to switch low loads and is used to separate control and load circuits. A input is protected against voltage peaks. To indicate the control status, the unit has an LED indicator. The compact enclosure allows space saving installation in consumer units or industrial cabinets.

Circuit Diagram

Connection Terminals

Terminal designation	Signal description
A1, A2	Control input
11, 12, 14	Changeover contact

Your Advantages

- Suitable for switching low loads > 10 V / > 10 mA
- Compact design for installation systems and industrial distribution systems according to DIN 43880

Features

- According to DIN EN 61 810-1
- Protective separation according to IEC/EN 61 140, IEC/EN 60 947-1
- 1 changeover contact
- With input wiring protection against voltage surges
- LED indicator
- Width: 17.5 mm

Approvals and Markings

Applications

- Link between the control and power levels
- For separating potentials

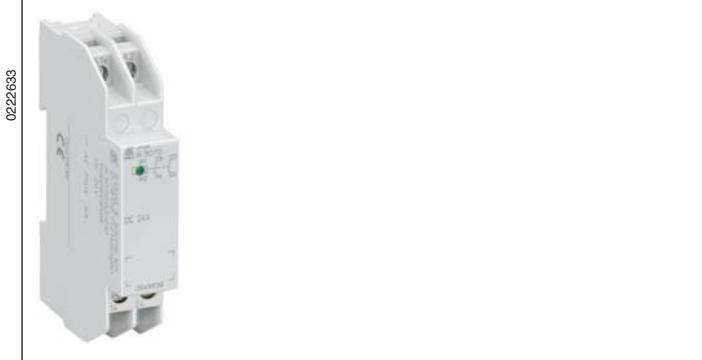

Indicator

yellow LED: on when the relay is supplied with current

Notes

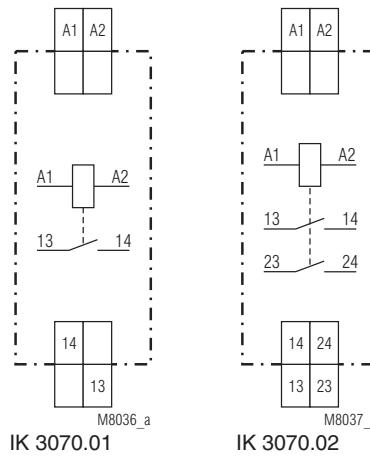

The interface relay is for switching low loads > 10 V / > 10 mA. The contacts also permit the maximum switching current. However, since the gold plating is burnt off at this current level, the unit is no longer suitable for switching low loads again afterwards.

Approvals and Markings

Applications

- For switching lamp loads
- Input interface relay, e.g. for activation of PLC
- Output interface relay, e.g. for PLC-controlled loads

Function

The contacts are actuated with an armature via a plunger. After the exciting voltage has dropped, a spring returns the armature (which is connected to the plunger) to its home position. The contacts can be actuated manually via a pushbutton on the front as well. The pushbutton acts at the same time as an operating position display. The contacts are closed when the pushbutton is pressed. The red pushbutton is flush with the front edge when there is no current.

Note: IL devices have 2, IN devices have 3 pushbuttons on the front. These are **not** linked together.

The pushbuttons only activate the contact shown on the front under the button.

Indicators

Pushbutton: pressed, when the relay is supplied with current

Options with Pluggable Terminal Blocks

Screw terminal (PS/plugin screw)

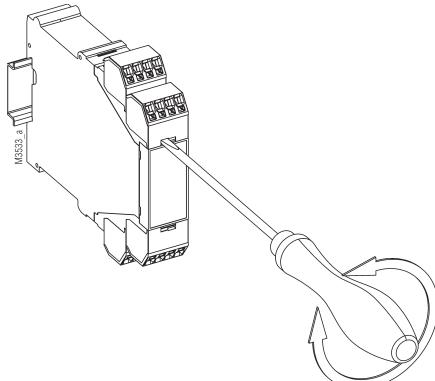

Cage clamp terminal (PC/plugin cage clamp)

Notes

Removing the terminal blocks with cage clamp terminals

1. The unit has to be disconnected.
2. Insert a screwdriver in the side recess of the front plate.
3. Turn the screwdriver to the right and left.
4. Please note that the terminal blocks have to be mounted on the belonging plug in terminations.

Latching Relay MK 8852

DOLD 

- According to IEC/EN 61 810-1
- Setting input A1 - A2
- Reset input A3 - A2
- Storage function
- Switch position indication
- Manual operation
- Width 22.5 mm

Function Diagram

Approvals and Markings

Application

Impulse conversion into a permanent function*

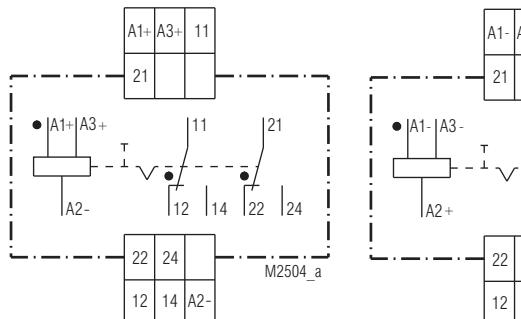

Notes

Latching relays are designed for pulse operation. In case of cyclic pulsed operation, the recommended pulse duration for t_s and t_r are within 0.03 ... 2 s each. A pulse-interval-ratio of 25 % duty cycle is recommended. In no case the permissible operating frequency may be exceeded. For single pulse operation pulse times of > 2 s are possible. A recovery time (min off time between 2 impulses) of > 6 s is required.

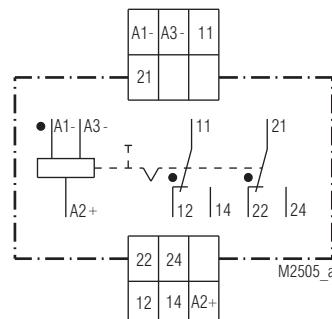

In case of a failure a continuous control is possible.

Simultaneous energization of A1 and A3 is not allowed!

Circuit Diagrams

UG 3076.12

UG 3076.15

Your Advantages

- According to IEC/EN 60 947-5-1
- Reliable fast response
- Simple contact multiplication
- Cost and space saving alternative compared to contactors
- With pluggable terminal blocks for easy exchange of devices

Features

- UG 3076.12: 2 changeover contact
UG 3076.15: 6 changeover contact
- Safe release voltage: the output relay is de-energized at $U < 27\% U_N$
- Width 22.5 mm

Approvals and Markings

Application

- Fast response, e. g. inductive load and circuit breakers
- Interfacing between control and load circuits
- Separate switching of several current circuits, e. g. at
 - Machines and plants,
 - Energy production and transport

Indication

green LED: on, when supply connected

Control Technique

Latching Relay UG 8851

DOLD 

0268644

Product Description

The latching relay UG8851 is designed with a wide AC/DC nominal voltage range. Short pulses of several milliseconds switch the relay into a defined position. To change the contact position only low power is necessary. No energy is necessary to hold the relay in ON-state. This is energy efficient and reduces the powerdissipation of the unit. On loss of power the relay stays in it's defined position. The special feature of forcibly guided contacts (IEC 61810-3) allows reliable monitoring of the contact state.

Your Advantage

- Large voltage range AC/DC 24 ... 240 V
- Protection against manipulation by sealable transparent cover over setting switches
- More contacts at small design
- Energy saving, no holding capacity necessary

Features

- According to IEC/EN 61810-1
- With forcibly guided contacts according to IEC 61810-3
- With manual operation and contact position indication via control lever
- With impulse energization A1 - A2
- With reset pulse B1 - B2
- 4 NC contacts, 4 NO contacts or 4 changeover contacts
- With pluggable terminal blocks for easy exchange of devices
- With coded terminal blocks
- Width 22.5 mm

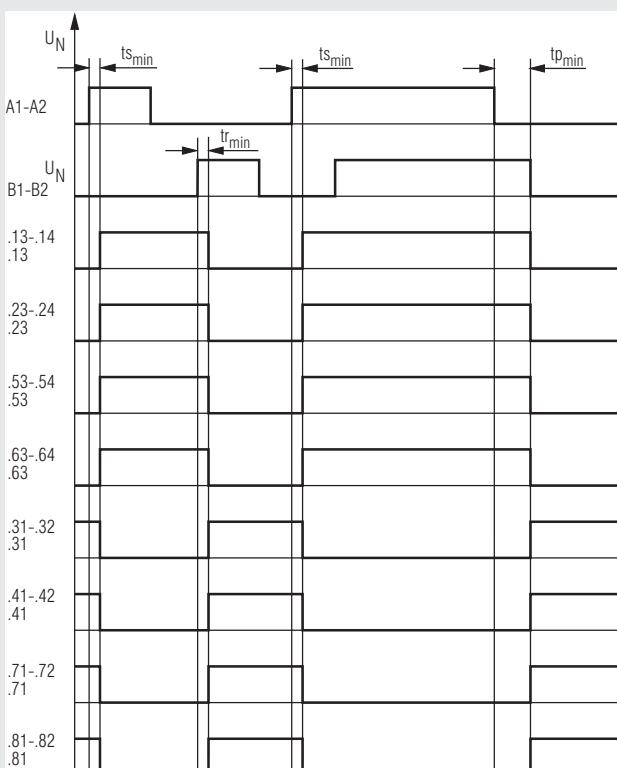

Approvals and Markings

Application

Pulse conversion into a continuous function
A pulse control (inputs side) leads to a continuous function (output side).

Function Diagram

M10967_c

ts_{min} = min. pulse de_activating (A1/A2)

tr_{min} = min. pulse de_activating (B1/B2)

tp_{min} = min. off/chargeover time *)

*) tp_{min} is the minimum time that has to pass after the negative edge of a control voltage pulse before the unit accepts a new control voltage pulse.

Function

The relay is operated either by voltage pulses or continuous voltage on the inputs A1-A2, B1-B2. When both coils are activated the contacts keep the state of the first energized coil. The 2 coil systems operate status driven. This means when both coils are energised and the first energised coil is deactivated the status of the contacts is inverted. On loss of voltage, the latching relay remains in its last contact position.

Indication

yellow LED *A1: on, when control voltage A1/A2 connected

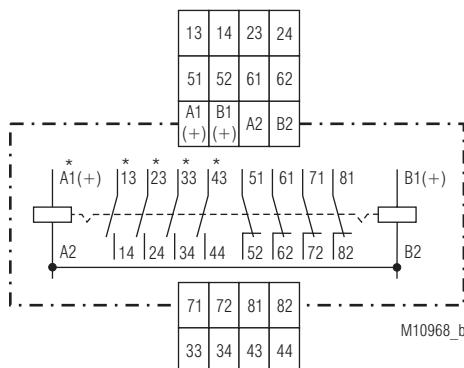

yellow LED B1: on, when control voltage B1/B2 connected

Notes

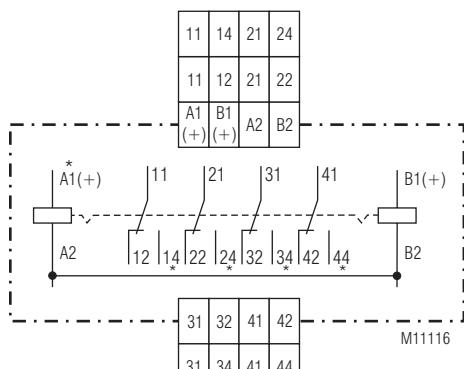

If coil A1-A2 / coil B1-B2 are controlled with DC, the terminals A1(+) and B1(+) have to be connected on the positive pole.

The device is available on request with customer specific RC element (Snubber Circuit) over the switching contact.

Safety Notes

Dangerous voltage.
Electric shock will result in death or serious injury.

Disconnect all power supplies before servicing equipment.

- Faults must only be removed when the relay is disconnected
- The user has to make sure that the device and corresponding components are installed and wired according to the local rules and law (TUEV, VDE, Health and safety).
- Settings must only be changed by trained staff taking into account the safety regulations. Installation work must only be done when power is disconnected.
- Observe proper grounding of all components

Circuit Diagrams

AD 8851.12

AD 8851.14 / AD 8851.13 (without 41-42-44)

The Circuit Diagrams have been provided with star-Marking. If the coil, provided with the star will be energized, the contacts, provided with the star, are closed.

Function	Technical Data		
The relay will be actuated by impulse or continuous energizing of the coils A1-A2 or B1-B2. During the energizing of both systems at the same time, the interlocking is disabled; the contact position corresponds with the energizing of the coil A1-A2.			
All contacts are on the same magnetic system, which is connected on A1, A2. Thus it is achieved, that in case of energizing of both systems at the same time, there will be no undefined contact condition.

Control Technique

MINITIMER
Contact Protection Relay
BA 7961

DOLD 

0276739

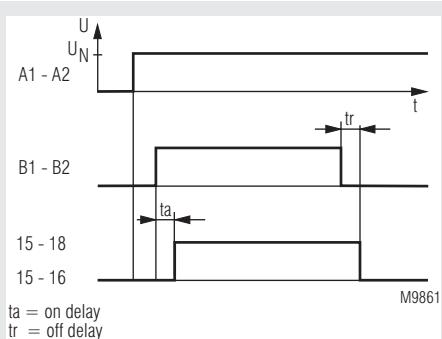

Product Description

The contact protection relay BA 7961 protects sensitive control contacts of e.g. digital plc outputs, limit contacts on measuring devices, low load reed contacts against early wearing.

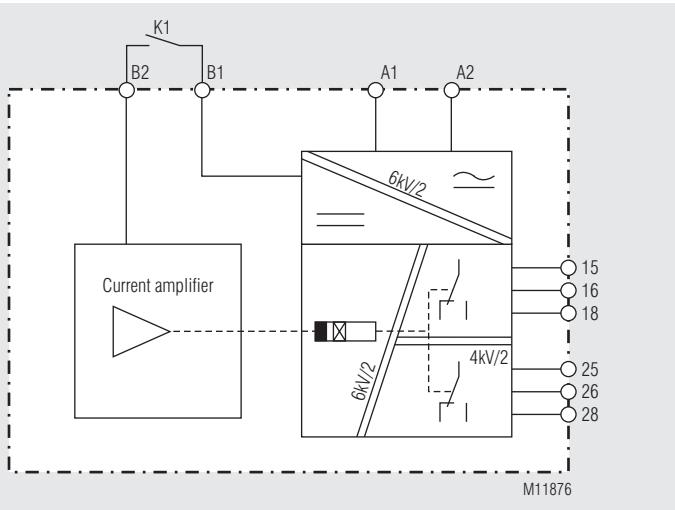

It has a low input consumption on B1-B2 control input and a high switching capacity of the output using a robust relay for mains voltage with 2 changeover contacts. Unintended switching caused by contact bouncing or vibrations are suppressed by an adjustable on delay and a fixed off delay.

The auxiliary supply A1/A2, the control input B1/B2 and the output contacts are galvanically separated. The control input must be voltfree, no external voltage must be connected. 2 LEDs show connected power supply and status of the output relay.

Function diagram

Block diagram

Your Advantages

- High electrical life of control contacts
- Longer maintenance intervals

Features

- According to IEC/EN 61 812-1
- Galvanic separation between control contact and supply voltage
- Wide auxiliary range
- Adjustable operate delay
- 2 changeover contacts delayed
- LED-indicator for power and contact position
- Width: 45 mm

Approvals and Marking

Applications

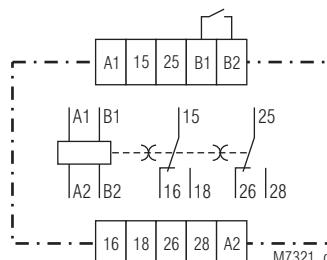

For protection of sensitive contacts e.g. limit value switches to measuring instruments such as thermometers, manometers and hygrometers

Interface Relay System
Output Interface Relay
IP 3070/022

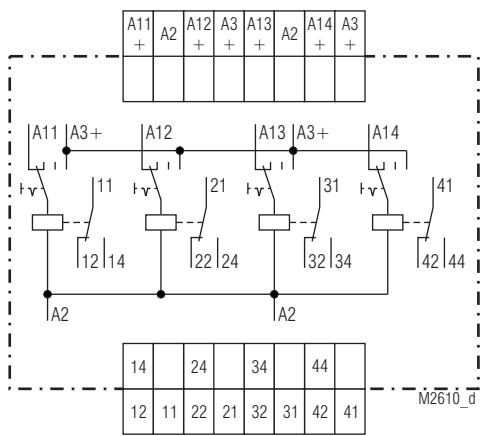

0276707

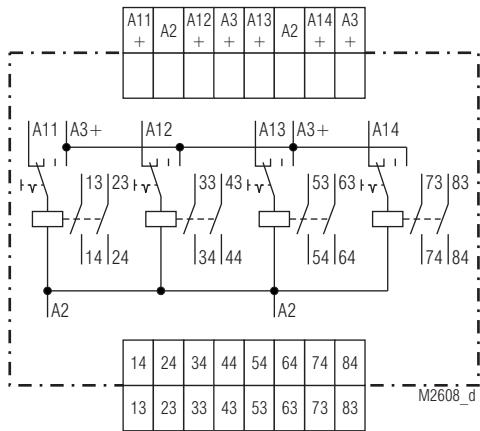

- According to IEC/EN 60 947-5-1
- 4 interface relay with separate control via A1 and common connection of A2
- With 3-position test switch:
 - Position 1: Normal operation
 - Position 2: Relay output always off
 - Position 3: Relay output always switched on for switch cabinets with mounting plate and cable duct
- With 1 changeover contact each
- 1 LED each for operating state
- Optionally with 2 NO contacts each
- Width: 70 mm

Connection Example

Interface relay IP 3070.11/022 with slide switch S1 ... S4 with 3 switch positions.

Position 1: Normal operation, i. e. relay control via e.g PLC.

Position 2: Relays are switched off, e.g. for testing the PLC.

Position 3: external control via "A3+"Terminal possible (Hand-sensor), e. g. for testing the loads 1 ... 4.

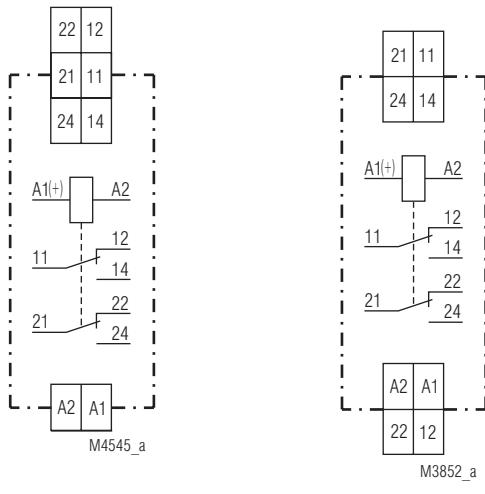

- According to DIN EN 61810
- With forcibly guided contacts according to IEC 61810-3
- Pluggable safety relay
- Low rated power consumption: 0.8 W
- Max. 2 output contacts
- Contact material: AgNi with fine gold
- High thermal current up to $I_{th} = 5 \text{ A}$
- Large temperature range: - 40 ... + 85 °C
- As option with free-wheel diode or varistor between A1/A2
- As option with AgSnO₂ or AgNi with hard gold
- Width: 15.8 mm

Notes

Safety relay with forcibly guided contacts OA 5669 and socket for supporting DIN-rail mounting.

SAFEMASTER
Interface Module
HC 3096N, HL 3096N

DOLD 

0270331

Your Advantages

- Simple contact extension and re-inforcement also of safety modules
- Cost and space saving alternative compared to contactors
- Simple contact monitoring via forcibly guided NC contact
- large wire cross section 0.5 - 2.5 mm² (12-24 AWG) reduces thermal load on wires

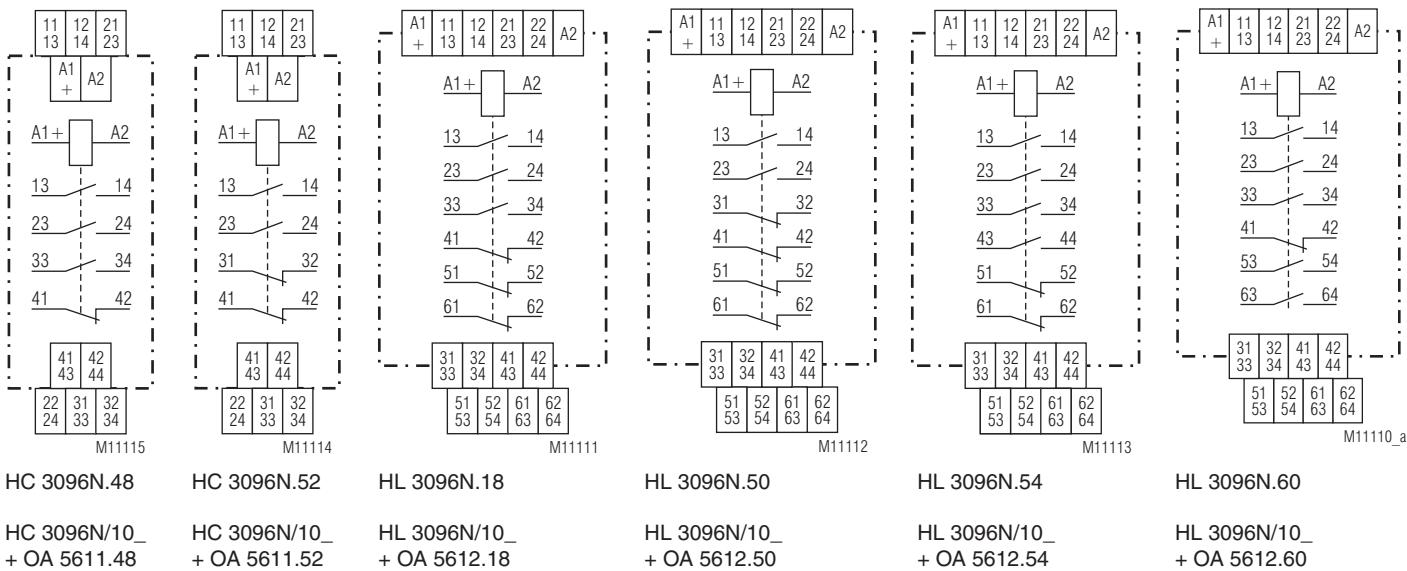

Features

- According to DIN EN 61810-1, IEC 60664-1, IEC/EN 60 947-5-1
- With forcibly guided contacts according to IEC 61810-3
- Models with soldered in or plug-in PCB safety relay consisting of:
 - plug in socket HC 3096N and safety relay OA 5611
 - plug in socket HL 3096N and safety relay OA 5612
- With polarity protected diode
- Optionally with free-wheeling diode across A1+ and A2
- Optionally AgNi + 0,2 µm Au or AgNi + 5 µm Au
- For DIN rail mounting according IEC/EN 60715
- HC 3096N: width 18 mm
HL 3096N: width 36 mm

Safety Notes

 **Dangerous voltage.**
Electric shock will result in death or serious injury.

 Disconnect all power supplies before servicing equipment.

- Faults must only be removed when the relay is disconnected
- The user has to make sure that the device and corresponding components are installed and wired according to the local rules and law (TUEV, VDE, Health and safety).
- Installation work must only be done when power is disconnected.

Product Description

The interface module HK 3087N has forcibly guided contacts. Therefore it can be used to safely separate control and load circuits as well as to reinforce contacts of safety devices.

The interface module has a strong isolation between monitoring and load contact and is designed for high thermal current.

Your Advantages

- Simple contact extension and re-inforcement also of safety modules
- Cost and space saving alternative compared to contactors
- Simple contact monitoring via forcibly guided NC contact
- large wire cross section 0.5 - 6 mm² (10 - 24 AWG) reduces thermal load on wires

Features

- According to IEC/EN 61810-1, IEC 60664-1,
- With forcibly guided contacts according to IEC 61810-3
- Models with soldered in PCB safety relay
- With polarity protected diode
- Optionally with free-wheeling diode across relay coil
- With LED indicator
- Optionally AgNi + 0,2 µm Au or AgNi + 5 µm Au
- For DIN rail mounting according IEC/EN 60715
- Clearance and creepage distance between NC and NO contact > 10 mm
- Width 22,5 mm

Approvals and Markings

Applications

- Interfacing between control and load circuits
- Contact extension and re-inforcement
- Separate switching of several current circuits, e. g. at
 - Machines and plants,
 - Energy production and transport

Options with Pluggable Terminal Blocks

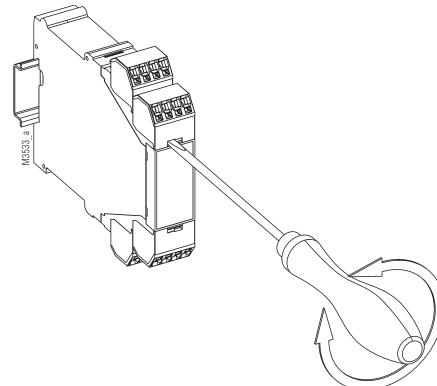

Screw terminal (PS/plugin screw) Cage clamp terminal (PC/plugin cage clamp)

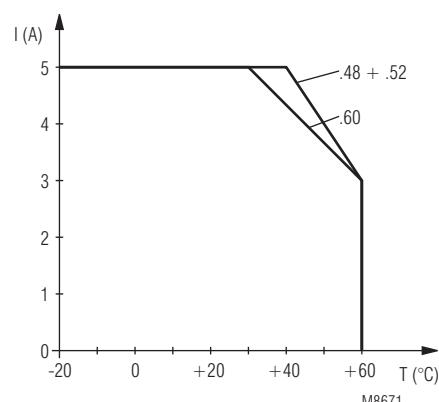

Notes

Removing the terminal blocks with cage clamp terminals

1. The unit has to be disconnected.
2. Insert a screwdriver in the side recess of the front plate.
3. Turn the screwdriver to the right and left.
4. Please note that the terminal blocks have to be mounted on the belonging plug in terminations.

Characteristic

0270828

Product Description

The interface module UG3088 includes 2 separate devices in one enclosure. Because of its forcibly guided contacts a safe interfacing between control circuit and load circuit is provided. It can also be used to multiply and reinforce the contacts of safety modules. Different internal configuration possibilities allow to offer interface modules for various applications. To switch e.g. high DC loads the the output contacts can be connected in series. On the module with 2NO and 2 NC contacts these can be connected internally as changeover contacts. Also a common control of both relays with only one input can be done.

Your Advantages

- According to IEC/EN 60 947-5-1
- Economic and space saving because of 2 separate interface modules in one enclosure
- Simple contact multiplication and reinforcement - also of safety modules
- Cost and space saving alternative compared to contactors
- Simple contact monitoring by forcibly guided contacts
- With pluggable terminal blocks for easy exchange of devices

Features

- With forcibly guided contacts according to IEC 61810-3
- Version with up to 2 x 4 contacts
- Variant to switch high DC-load
- Width: 22,5 mm

Approvals and Markings

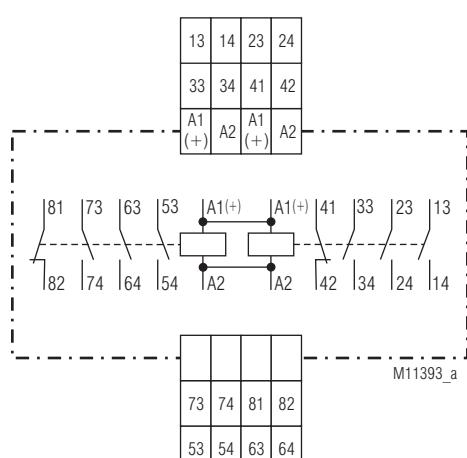

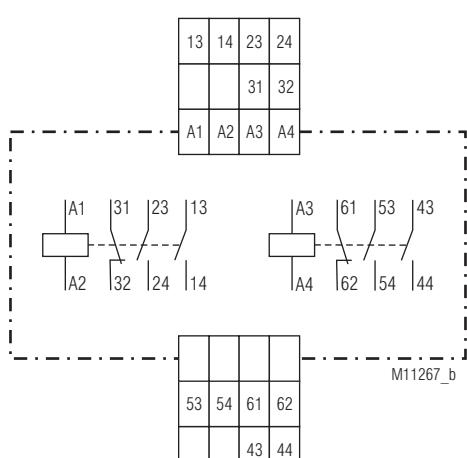

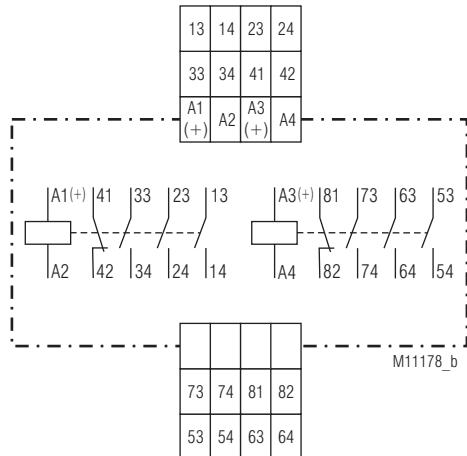

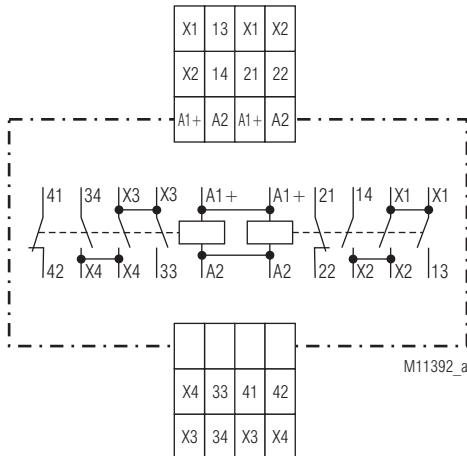

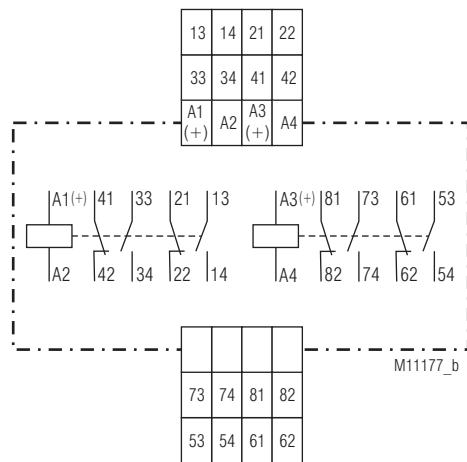

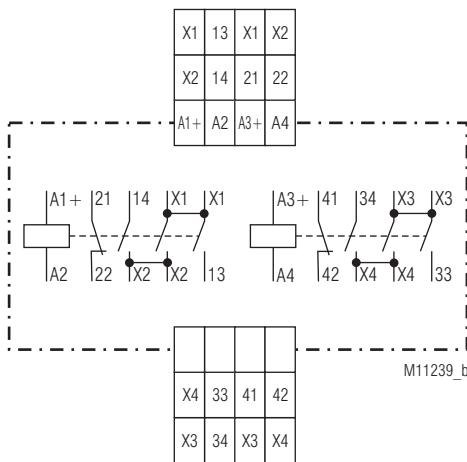

Applications

- Interfacing between control and load circuits
- Contact multiplication and reinforcement
- Separate switching of several current circuits, e. g. at
 - Machines and plants
 - Energy production and transport

Product Description

The interface module UG 3091 provides 10 contacts in 2 relays with forcibly guided contacts. It is suitable for safe electrical separation of control and power levels as well as for contact multiplication and reinforcement of safety modules.

Circuit Diagram

Your Advantages

- Simple contact multiplication and reinforcement also for safety modules
- Cost and space saving alternative compared to contactors
- Easy monitoring of contact state via forcibly guided NC contacts

Features

- According to IEC/EN 60 947-5-1
- With partially forcibly guided contacts according to IEC 61810-3
- 10 output contacts
- As option with pluggable terminal block for easy exchange of devices - with screw terminals
- Terminal blocks coded
- 22,5 mm Baubreite

Approvals and Markings

Applications

- Interfacing between control and load circuits
- Contact multiplication and reinforcement
- separate switching of several current circuits, e. g. with
 - Machines and plants,
 - Energy production and transport

Indicator

green LED: on, when supply connected

Technical Data

Input

Nominal voltage U_N:	DC 24, 110 V (others on request)
Voltage range:	0.8 ... 1.1 U_N
Nominal consumption:	1.4 W
Min. release time	
DC 24 V:	200 ms
DC 110 V:	500 ms

Output

Contacts:	8 NO and 2 NC contacts
Contact type:	2 relays, forcibly guided
Operate time:	typisch 12 ms
Rückfallzeit:	typisch 35 ms
Nominal output voltage:	AC 250 V, DC 24 V
Thermal current I_{th}:	max. 4 A (see quadratic total current limit curve)

Switching capacity

to AC 15:		
NO contacts:	3 A / AC 230 V	IEC/EN 60 947-5-1
NC contacts:	2 A / AC 230 V	IEC/EN 60 947-5-1
nach DC 13:		
NO contacts:	2 A / DC 24 V	IEC/EN 60 947-5-1
NC contacts:	2 A / DC 24 V	IEC/EN 60 947-5-1
to DC 13:		
NO contacts:	4 A / DC 24 V at 0.1 Hz	IEC/EN 60 947-5-1
NC contacts:	4 A / DC 24 V at 0.1 Hz	IEC/EN 60 947-5-1

Electrical life

at AC 230 V, 5 A, $\cos \varphi = 1$:	2.2 $\times 10^6$ switch. cycl.	IEC/EN 60 947-5-1
at DC 24 V, 5 A, ohmic:	1.5 $\times 10^6$ switch. cycl.	IEC/EN 60 947-5-1

Permissible switching frequency:

10 switching cycles / s

Switching voltage min./max.:

AC/DC 10 V / AC/DC 250 V

Short circuit strength

max. fuse rating:

NO contact:	10 A gG / gL	IEC/EN 60 947-5-1
NC contact:	6 A gG / gL	IEC/EN 60 947-5-1

Mechanical life:

$\geq 20 \times 10^6$ switching cycles

General Data

Operating mode:

Continuous operation

Temperature range:

- 20 ... + 60 °C (siehe Kennlinie)

Operation:

- 40 ... + 70 °C

Storage:

Clearance and creepage distances

Rated impulse voltage / pollution degree

Auxiliary voltage / contacts:	6 kV / 2	IEC 60 664-1
Contacts / contacts:	4 kV / 2	IEC 60 664-1

EMC

Electrostatic discharge:	8 kV (air)	IEC/EN 61 000-4-2
HF irradiation		

80 MHz ... 2.7 GHz:	10 V / m	IEC/EN 61 000-4-3
Fast transients:	4 kV	IEC/EN 61 000-4-4

Variants

UG 3096.57/004:

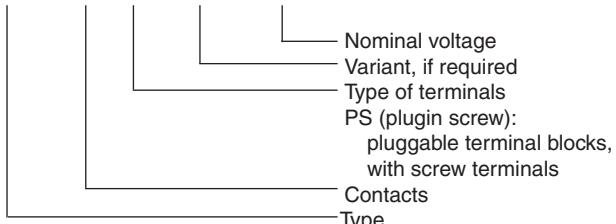

For switching small loads of 10 mVA ... 12 VA resp. 10 mW ... 12 W in the ranges 2 ... 60 V und 2 ... 300 mA. The device is also suitable for switching the maximum switching current. However, this will burn off the gold plating of the contacts, so that switching of small loads is no longer possible afterwards.

UG 3096.63/800:

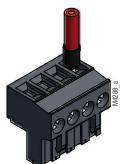

With contacts connected in series to switch high DC-loads

Ordering example for variant

UG 3096 .57 / DC 24 V

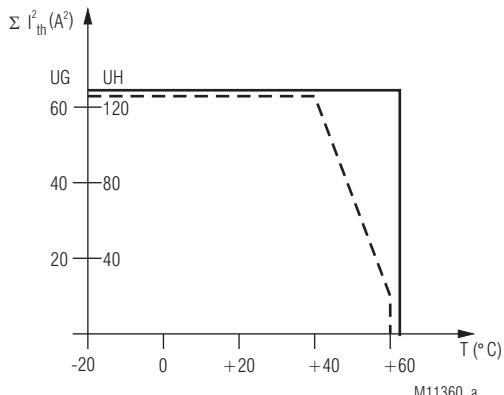

Option with Pluggable Terminal Block

Screw terminal
(PS/plugin screw)

Characteristic

— Mounted with distance, with air circulation

- - - Mounted without distance,
heated by units with similar load

Quadratic total current

$$\sum I^2_{th} = I^2_{th1} + \dots + I^2_{th8} + \dots + I^2_{th16}$$

$I_{th1} \dots I_{th16}$: thermal current in contactrows

Quadratic total current limit curve

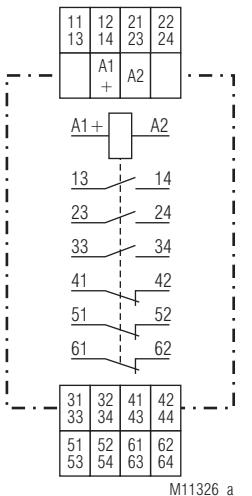

Your Advantages

- Simple contact extension and re-inforcement also of safety modules
- Cost and space saving alternative compared to contactors
- Simple contact monitoring via forcibly guided NC contact
- Large wire cross section 0.5 - 2.5 mm² (12-24 AWG) reduces thermal load on wires
- Fast connection via cage clamp terminals

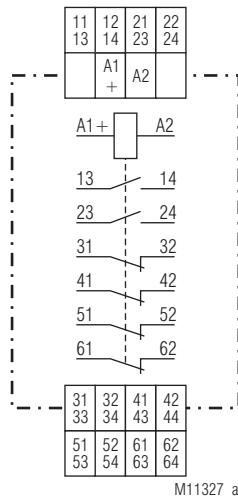

Features

- According to DIN EN 61810-1, DIN EN 60644
- With forcibly guided contacts according to IEC 61810-3
- Models with soldered in PCB safety relay
- With polarity protected diode
- Optionally with free-wheeling diode across A1+ and A2
- Optionally AgNi + 0.2 µm Au or AgNi + 5 µm Au
- For DIN rail mounting according IEC/EN 60715
- Width: 36 mm

Safety Notes

Dangerous voltage.
Electric shock will result in death or serious injury.

Disconnect all power supplies before servicing equipment.

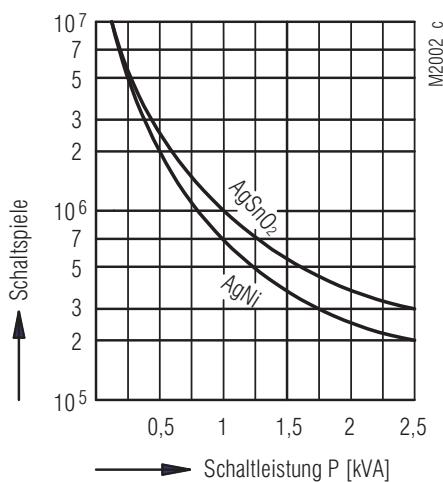

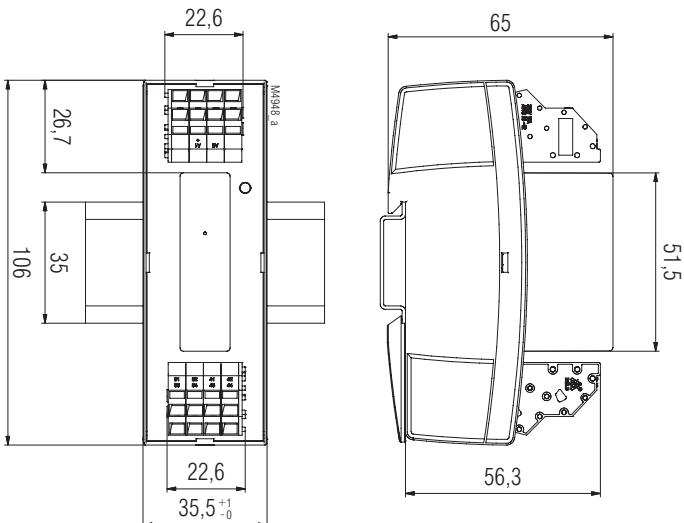

- Faults must only be removed when the relay is disconnected
- The user has to make sure that the device and corresponding components are installed and wired according to the local rules and law (TUEV, VDE, Health and safety).
- Installation work must only be done when power is disconnected.

Switched Power Supply BG 5595

DOLD 

0257046

Circuit Diagram

- According to IEC/EN 60 950
- Protection class II acc. to EN 61 558-1
- Secondary voltage DC 24 V up to 1 A
- Short circuit and overload protection
- Width 22.5 mm

Approvals and Markings

Application

For supplying 24 V DC voltage.

Function

The switched power supply unit provides an regulated DC voltage of 24 V on the output. Due to the operating principle an efficiency of approx. 85 % the power dissipation is cut down to a minimum.

Connection Terminals

Terminal designation	Signal description
A1, A2	Auxiliary voltage AC or DC
Us+, Us-	Secondary voltage DC 24 V

Indicator

LED green: on when secondary voltage connected

Technical Data

Primary voltage:	AC/DC 110 ... 230 V The output voltage is available on 2 pairs of terminals (A1 and A2) These are connected internally in parallel.
Voltage range AC: DC:	70 ... 265 V 85 ... 300 V
Primary current at nominal voltage U_N: no-load operation at AC 230 V: at DC 230 V: at AC 110 V: at DC 110 V:	20 mA 7 mA 16 mA 10 mA
Efficiency:	approx. 85 %
Secondary voltage:	DC 24 V \pm 10 % The output voltage is available on 2 pairs of terminals. (U_{S+} and U_{S-}) These are connected internally in parallel.
Secondary current:	continuously, device mounted without distances heated by devices with same load: 0.5 A at ambient temperature 45 °C continuously, device mounted with 10 mm spacing: 1 A at ambient temperature 45 °C short time 1 min: 1.3 A at AC 110 V; 1.6 A at AC 230 V
Residual ripple at max. load:	\leq 1 %
Current limitation:	electronic short circuit protection and overload protection. Disconnection of 1.3 A at AC 110 V and 1.6 A at AC 230 V.

- Protection class II, according to EN 61 558-1
- Secondary voltage DC 24 V up to 350 mA
- Short circuit protection and overload protection
- Width: 35 mm

Approvals and Markings

Application

For DC-voltage 24 V

Function

The switched power supply provides a controlled DC voltage of $24 \text{ V} \pm 5\%$.

Indication

LED green: on when secondary voltage connected

Notes

With large capacitive load the power supply detects short circuit on power up. If the secondary voltage of 24 V is not reached within 64 ms the power supply switches off. After 2 sec a new attempt is started.

Technical Data

Primary voltage:	AC/DC 85 ... 265 V The terminal A2 is double. Internally these terminals are connected in parallel.

Your Advantages

- Compact CAN-operation
- Graphical programming
- Quick and easy installation
- Various input- / output module digital / analogue available

Features

- According to IEC/EN 61 131-2, EN 50 178
- Operation as master
 - Operation as slave
 - Transfer rate up to 1 Mb/s
 - Interface according to DS301 version 3.0
- 2 digital inputs for DC 24 V
- 2 relay outputs
- LED indicators
- Standard programming software CODESYS® under Windows according to IEC/EN 61131-3:
 - Instruction set
 - Ladder diagram
 - Function block diagram
 - Sequential function chart
 - Structured text (similar to Pascal)
- 128 KB Flash memory for user program
- 128 KB RAM for user data
- 16 KB battery buffered RAM for no-voltage safe data
- Battery buffered real time clock
- Monitoring contact for RUN status of the PLC
- Width: 35 mm

Additional Information

- Data sheet Input Module IP 5502
- Data sheet Output Module IP 5503
- Data sheet Emergency Stop Monitor BH 5922

Approvals and Markings

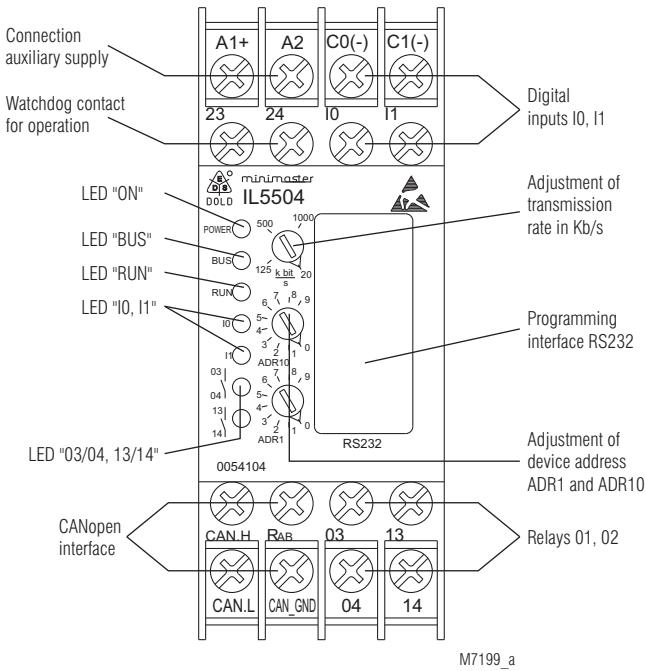

Application

The PLC runs a user programm edited with the programming software PN 5501. The programm can process local I/Os on the PLC as well as remote I/Os via the CANopen bus.

Indicators

green LED „ON“:	on, when supply connected
yellow LED „BUS“:	on, when bus is active
yellow LED „RUN“:	on, when PLC in RUN state flashing, when failure
green LED „I0, I1“:	on, when corresponding input is active (I0/C0-, I1/C1-)
red LED „O1, O2“:	on, when corresponding output relay is active (03/04, 13/14)

Setting and Adjustment

IL 5504

Adjustment of address:

To allow communication on the CANopen-Bus the device address has to be set with the 2 rotational switches between 1 ... 99.

Set-up Procedure:

- 1.) Connect device to CANopen-bus
- 2.) Terminate bus on both ends with bridge between CAN-H and R_{ab}
- 3.) Adjust transmission speed
- 4.) Set knot address
- 5.) Transmit program form PC to PLC IL 5504 with programming software and store it.

Technical Data

Auxiliary voltage

Auxiliary voltage U_H A1/A2: DC 24 V
Voltage range: 0.8 ... 1.1 U_N
Nominal consumption: 1.4 W

Input

Inputs: 2 digital inputs according to IEC/EN 61131-2 galvanic separated by optocouplers
Input voltage: DC 24 V
Signalverzögerung: approx. 2 ms

Output

Contacts: 2 relay outputs
Thermal current I_{th}: 2 A
Switching capacity to AC 15: 3 A / AC 230 V IEC/EN 60 947-5-1
Switching capacity: at DC 24 V: 48 W
 at AC 230 V: 460 VA
Short circuit strength
max. fuse rating: 4 A gG / gL IEC/EN 60 947-5-1
Mechanical life: > 10⁶ switching cycles
Programming interface RS232

Wire: Null Modem wire link
Transmission parameter: 57.6 KBaud, 8N1
 The auxiliary voltage U_H is not galvanically separated from the programming interface.

CANopen interface

Wire: screened twisted pair
Transmission speed: adjustable 20 Kb/s, 125 Kb/s, 500 Kb/s, 1 Mb/s,

Attention: Both ends of the 2-wire bus have to be terminated with a bridge between CAN_H and R_{ab}. The auxiliary voltage U_H is not galvanically separated from the CANopen interface.

General Data

Buffer for RAM and Realtime

clock: 3 years
Cycle time: approx. 10 ms + (0.4 ms per translated 1 Kb user program)

Immunity against phase failure:

20 ms

Operating mode: Continuous operation

- 20 ... + 60°C

Temperature range: Clearance and creepage distances

overvoltage category / pollution degree auxiliary voltage, CANopen interface to digital inputs: 1.5 kV / 2 IEC 60 664-1

digital inputs to digital inputs: 1.5 kV / 2 IEC 60 664-1

auxiliary voltage, CANopen interface to relay outputs: 4 kV / 2 IEC 60 664-1

relay outputs to relay outputs: 4 kV / 2 IEC 60 664-1

EMC

Electrostatic discharge: 8 kV (air) IEC/EN 61 000-4-2

HF-irradiation: 10 V/m IEC/EN 61 000-4-3

Fast transients: 2 kV IEC/EN 61 000-4-4

Surge voltages between wires for power supply: 1 kV IEC/EN 61 000-4-5

Interference suppression: Limit value class B EN 55 011

Degree of protection

Housing: IP 30 IEC/EN 60 529

Terminals: IP 20 IEC/EN 60 529

Technical Data

Housing:	Thermoplastic with V0-behaviour according to UL subject 94
Vibration resistance:	amplitude 0.35 mm frequency 10 ... 55 Hz, IEC/EN 60 068-2-6
Climate resistance:	20 / 060 / 04 IEC/EN 60 068-1
Terminal designation:	EN 50 005
Wire connection:	2 x 2.5 mm ² solid or 2 x 1.5 mm ² stranded wire with sleeve DIN 46 228-1/-2/-3/-4
Wire fixing:	Flat terminals with self-lifting clamping piece IEC/EN 60 999-1
Mounting:	DIN rail IEC/EN 60 715
Weight:	150 g

Dimensions

Width x height x depth: 35 x 90 x 58 mm

Application Example IL 5504

** Both ends of the 2-wire bus have to be terminated with a bridge between CAN-H and Rab.

Application Example

CANopen-application for greenhouses:
dependent on temperature- and humidity ventilation flap applications and
sprinkler systems for plants in a greenhouse.

Installation / Control Technique

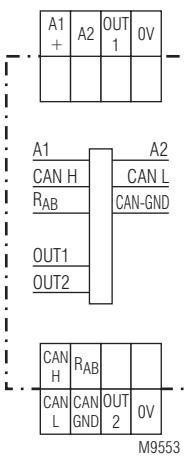

MINIMASTER Analogue Output Module For CANopen IL 5507

0254914

Circuit Diagram

M9553

Your Advantages

- Compact structure
- easy installation

Features

- For installation in consumer units or industrial cabinets
- Space saving with 2 analogue outputs at 35 mm width required space not more than for 2 standard line circuit breakers
- 2 analogue outputs, optionally with each $2 \times 0 \dots 10 \text{ V}$, $2 \times 0 \dots 20 \text{ mA}$, $2 \times -10 \text{ V} \dots +10 \text{ V}$ oder $2 \times 4 \dots 20 \text{ mA}$
- 12 bit resolution allows accuracy of $< \pm 0.1\%$
- Galvanic separation between logic, output and bus guarantees high interference immunity
- No external voltage source necessary for output signal
- Can be used in all CANopen networks due to high data transmission rate up to 1Mbit/s
- Free configuration software CoDeSys
- According to IEC/EN 61 131-2
- CANopen interface according to DS301 version 3.0, DS401
- LED indicators for supply voltage and Bus status

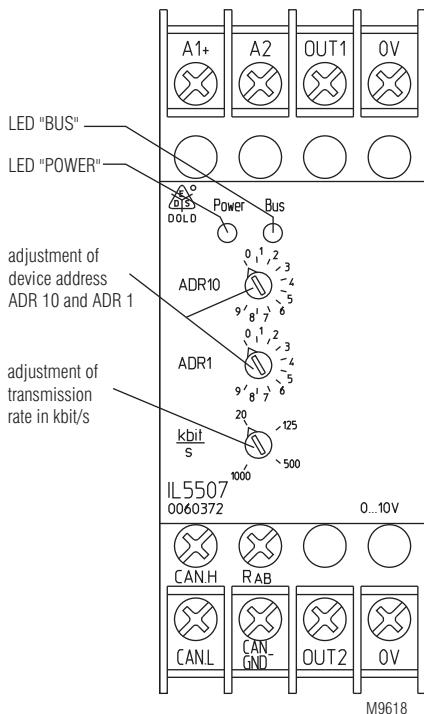

Approvals and Markings

Additional Information about this topic

In addition to the analogue output module IL 5507 Dold offers a complete range of master and slave modules for CANopen field bus systems. Also devices with protection class IP 67 are available. These can be mounted directly at the application without cabinet. This reduces wiring and failures.

Setting and Adjustment

The configuration is made with the programming software PN 5501 in conjunction with minimaster IL 5504 / IN 5504 or e.g. with ProCANopen. The corresponding configuration file on CD can be ordered under order no. PN 5501, article no. 0052860

Application

The analogue module IL 5507 for CANopen generates analogue signals e.g. to operate inverters, power- and servo amplifiers. It is designed into a compact installation enclosure and can be used in industry and building automation.

Indication

- LED yellow "Power": on when supply connected
LED yellow "BUS": on, when bus is active, pulsing when bus is inactive

Set-up Procedure

1. Connect device to CANopen-bus
2. The CANopen bus cable has to be terminated with a 120Ω resistor on both ends (on DOLD devices this can be done by linking the terminals CAN-H and R_{AB})
3. Adjust transmission speed (e. g. 20 k bit / s)
4. Adjust device addresses
5. Configure bus, e.g. with ProCANopen

Technical Data

Auxiliary Voltage

Auxiliary Voltage U_H , A1/A2: DC 24 V
Voltage range: 0.85 ... 1.2 U_N
Nominal consumption: < 2.0 W at DC 24 V

Output

Output: 2, galvanic separation to bus and supply voltage
Separating potentials: AC 350 V_{eff}
Output current: 0 ... 10 V
Output voltage: 0 ... 20 mA
Burden: > 1 k Ω for 0 ... 10 V; -10 V ... +10 V
< 500 Ω for 0 ... 20 mA; 4 ... 20 mA
< 10 mA for 0 ... 10 V; -10 V ... +10 V
Output voltage: 2-wire screened
Connection: Resolution: 12 bit
Accuracy: < ± 0.1 % of end of scale value
Temperature coefficient: < 0.01 % of max. scale value
Short circuit current / duration: 20 mA / ∞
CANopen interface
IL 5507.90/1_ _ : acc. to ISO 11898-1, galvanic separation
Wiring: screened twisted pair
Transmission rate: settable 20 K bit/s, 125 K bit/s, 500 K bit/s, 1 M bit/s,
Max. length: 20 K bit/s = 2.500 m
125 K bit/s = 500 m
500 K bit/s = 100 m
1 M bit/s = 25 m

General Data

Nominal operating mode: continuous operation
Temperature range: 0 ... + 60°C
EMC
Electrostatic discharge (ESD): 8 kV (air) IEC/EN 61 131-2
HF irradiation: 10 V IEC/EN 61 000-4-6
Fast transients
wires for power supply: 2 kV IEC/EN 61 131-2
Fast transients
Analog output: 0.25 kV IEC/EN 61 131-2
Interference suppression: Limit value class B EN 55 011
Degree of protection
Housing: IP 40 IEC/EN 60 529
Terminals: IP 20 IEC/EN 60 529
Enclosure: thermoplastic with VO behaviour according to UL Subject 94
Mechanical operating conditions: EN 61 131-2
Climate resistance: EN 61 131-2
Terminal designation: EN 50 005
Wire connection: 2 x 2.5 mm² solid or 2 x 1.5 mm² stranded ferruled DIN 46 228-1/-2/-3/-4
Wire fixing: Flat terminals with self-lifting clamping piece IEC/EN 60 999-1
Mounting: DIN rail DIN/EN 60 715
Weight: 110 g

Dimensions

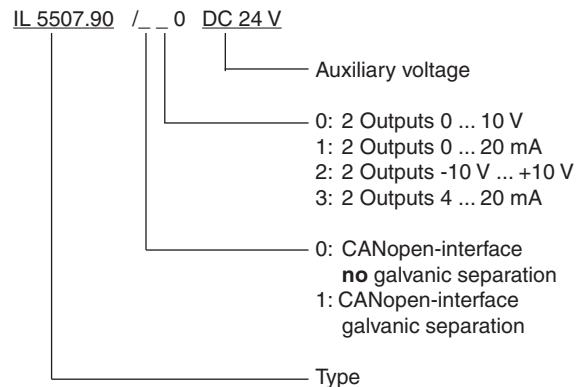

Width x height x depth: 35 x 90 x 61 mm

Standard Types

IL 5507.90/100 DC 24 V
Article number: 0060372
• 2 analogue Outputs 0 ... 10 V
• Nominal voltage U_N : DC 24 V

IL 5507.90/110 DC 24 V
Article number: 0060373
• 2 analogue Outputs 0 ... 20 mA
• Nominal voltage U_N : DC 24 V

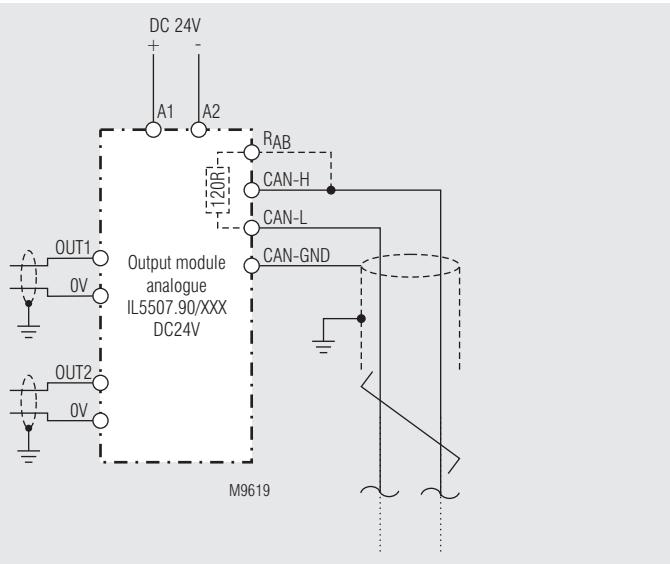

Ordering Example

Accessories

- CANopen PLC IL 5504
- Input / Output module IN 5509
- Input module, digital IP 5502
- Output module, digital IP 5503
- Input module, analogue IL 5508

Application Example

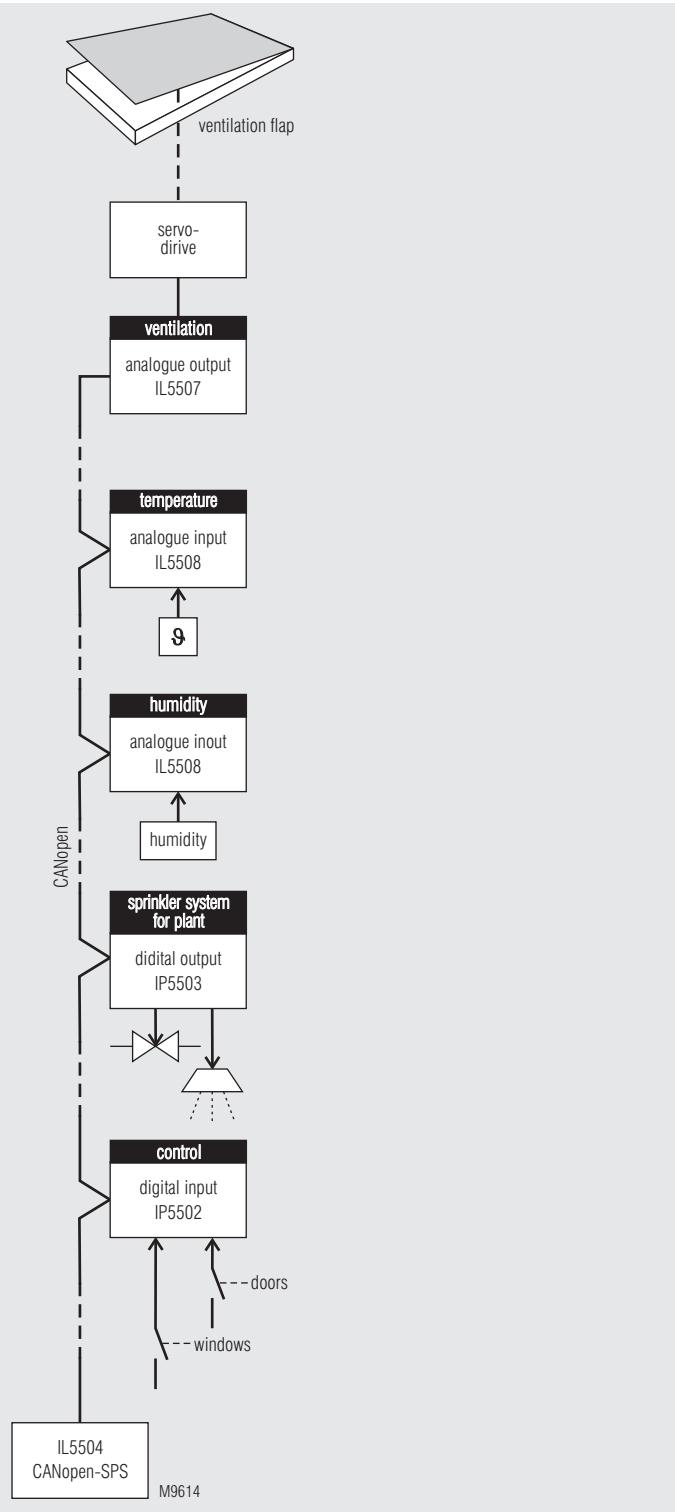

CAN-signals

CAN-H: CAN_H bus line (dominant high)
 CAN-L: CAN_L bus line (dominant high)
 R_{AB}: Termination resistor 120 Ω
 CAN-GND: reference potential of CAN-tranceiver

Notes for wiring

- a) Mixed networks, or networks that are not galvanically separated
 - CAN-GND is connected between all devices (CIA DRP 303-1).
 - if no 3rd wire is available in the bus cable, the screen of the cable can be used. In this case the screen has to be connected to PE at one point.
- b) Galvanic separated networks
 - if the networks are completely separated CAN-GND must not be wired (CIA DRP 303-1).
 - The screen is connected to PE.
- c) An equalisation of potentials between units in far distance has to be provided.
- d) The CAN-bus must be terminated at the first and last device on the bus with a 120 Ω resistor, e.g. insert a link on terminals R_{AB} and CAN-H.
- e) Analogue signal wires must be screened. the screen has to be connected to ground near to the input module.
- f) To achieve proper function, the DIN rail must have a good connection to ground.

Application Example

CANopen-application for greenhouses:
 dependend on temperature- and humidity ventilation flap applications and sprinkler systems for plants in a greenhouse.

- Datasheet Analogue Output Module IL 5507

Approvals and Markings

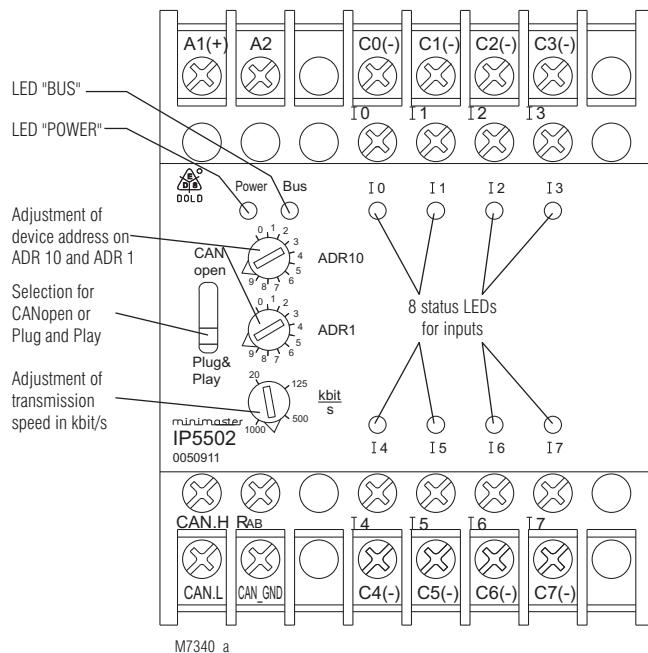

Application

The digital input module IP 5502 collects signals of a control circuit from limit switches, push buttons, sensors etc. The modules are used in industrial control circuits and building automation.

Indicators

- | | |
|--|-------------------------------|
| yellow LED "Power": | on, when supply connected |
| yellow LED "BUS": | on, when bus is active |
| green LEDs I ₀ ... I ₇ : | on, when input signal applied |

Setting and Adjustment

CANopen operation

With switch in position "CANopen" the CAN bus runs the CANopen protocol. The configuration is made with the programming software PN 5501 in conjunction with minimaster IL 5504 / IN 5504 or e.g. with ProCANopen. The corresponding configuration file on CD can be ordered under order no. PN 5501, article no. 0052860

Plug and Play operation

With switch in position "Plug and Play" the CANopen bus runs a variant of the CANopen protocol and allows only to operate Dold modules that have this feature. If a system is configured in Plug and Play operation, it can be altered to CANopen at any time.

Address setting in Plug and Play mode

To allow the input module to communicate via CAN-bus with a corresponding device, the address has to be adjusted on the 2 rotational switches on the front see below: The addresses 1 ... 49 and 51 ... 99 can be chosen. In Plug and Play mode the addresses 0 and 50 do not exist.

Input module IP 5502 with address transmits to	Output module IP 5503 with address
1	→ 51
.	.
49	→ 99

Example of setting:
Upper rotational switch "ADR 10": address 14
Lower rotational switch "ADR 1": in position 1
in position 4

Setting and Adjustment

Set-up procedure

- 1.) Connect device to CANopen-bus
- 2.) Terminate bus on both ends with bridge between CAN-H and R_{ab} on first and last module.
- 3.) Adjust transmission speed (e.g. 20 K bit / s)
- 4.) Adjust device addresses

Attention:

To allow transmission in Plug and Play mode, one of the input modules e.g. IP 5502 of the CAN-bus has to be set to address 1.

Technical Data

Standard Type

IP 5502.08 DC 24 V	
Article number:	0050911
• 8 digital inputs	
• Nominal voltage U _N :	DC 24 V
• Width:	70 mm

Variant

Ordering example for variant

IP 5502.08/_00 DC 24 V

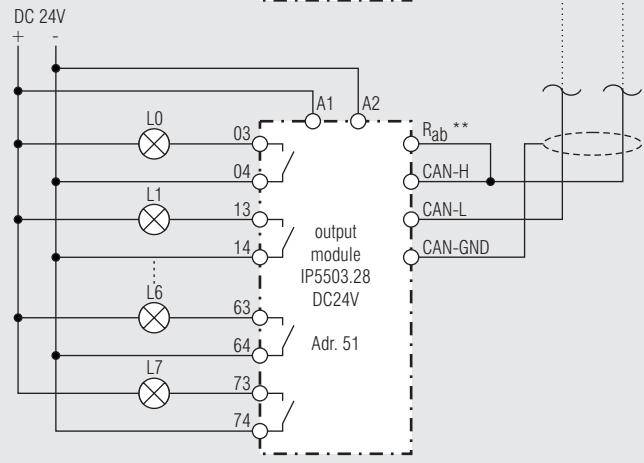

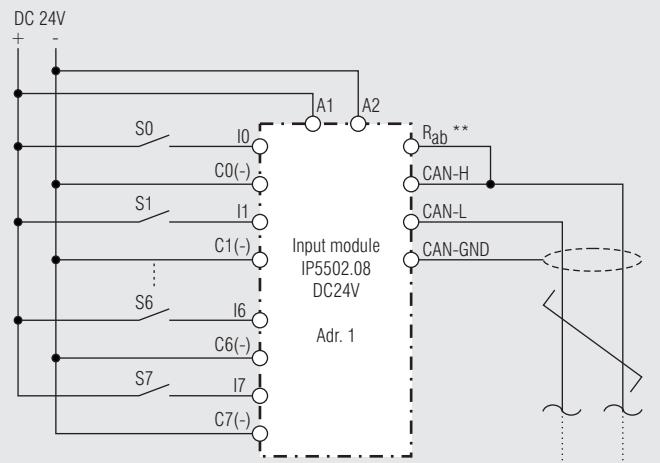

0 CANopen interface without galvanic separation

1 CANopen interface with galvanic separation

Accessories

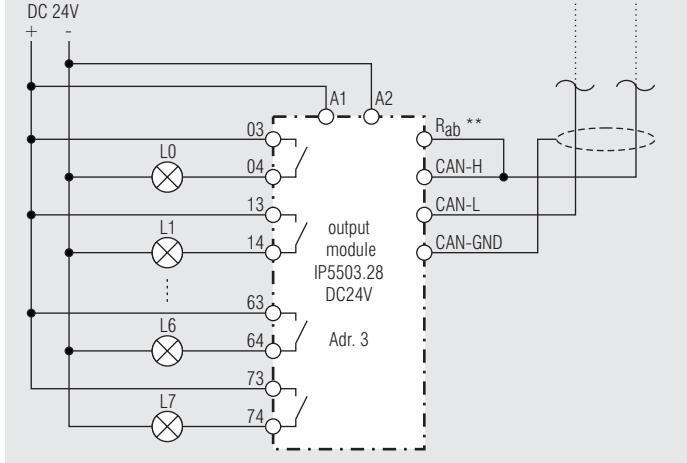

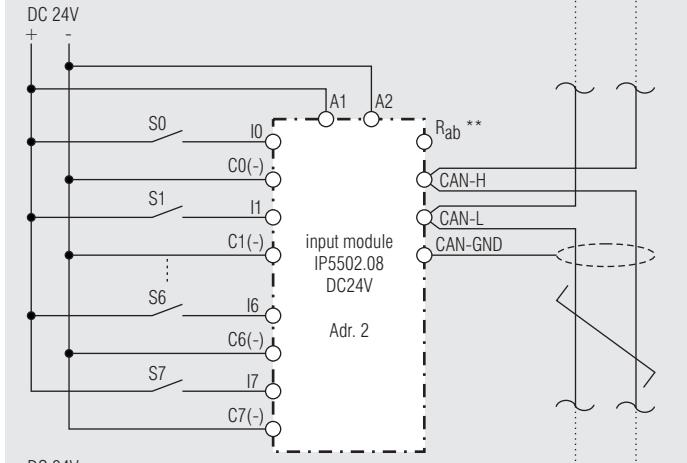

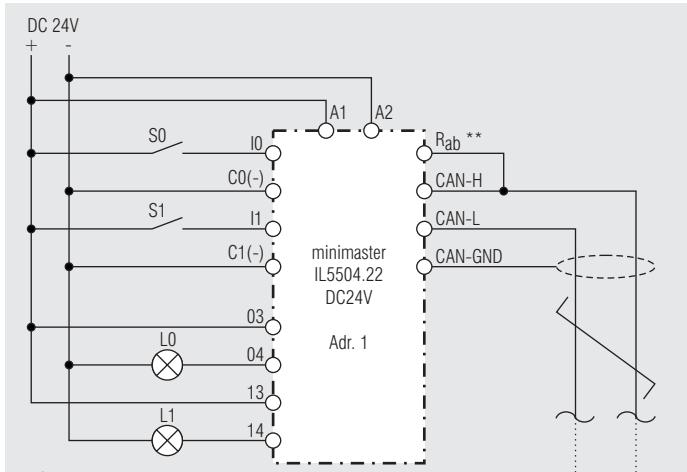

- CANopen PLC IL 5504
- Input / Output module IN 5509
- Input module, digital IP 5502
- Output module, digital IP 5503
- Input module, analogue IL 5508
- Output module, analogue IL 5507

Application Examples

** Both ends of the 2-wire bus have to be terminated with a bridge between CAN-H and R_{ab}.

M7329_a

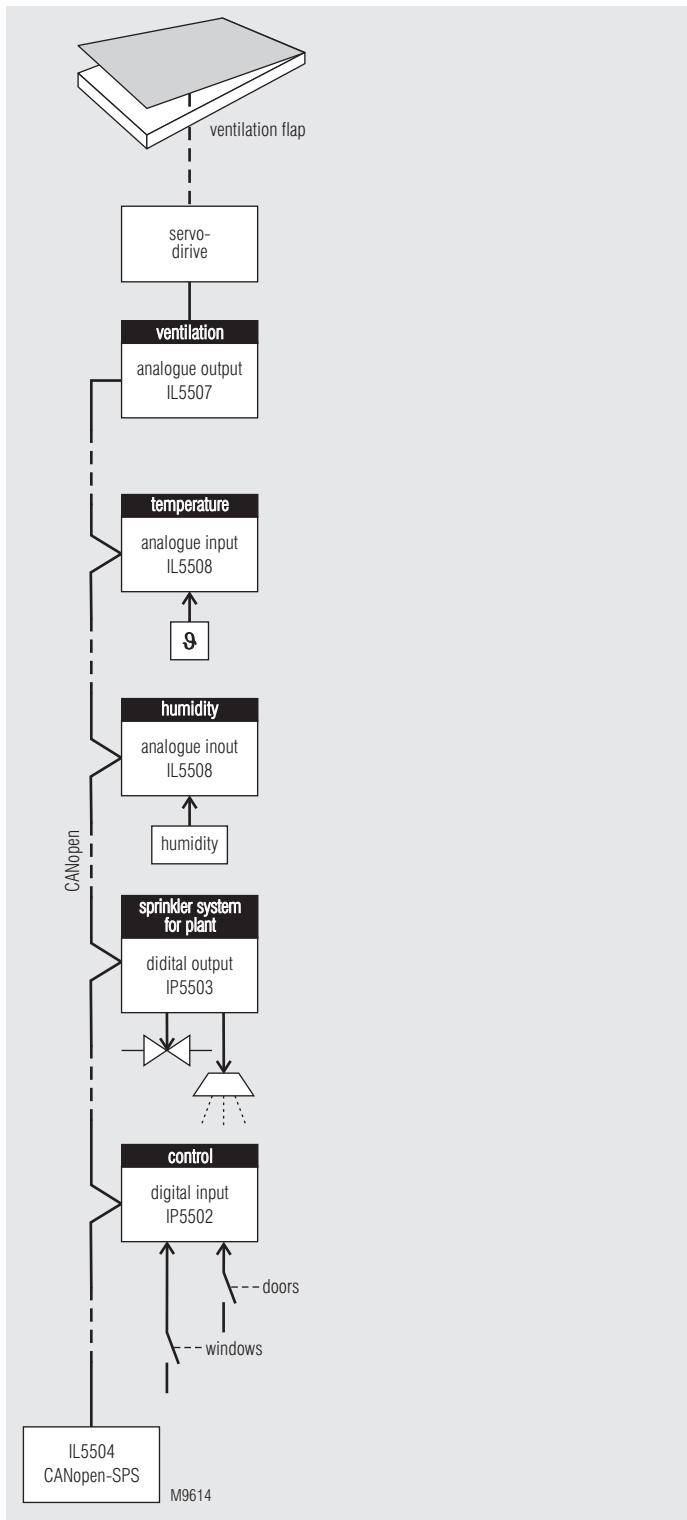

** Both ends of the 2-wire bus have to be terminated with a bridge between CAN-H and R_{ab}.

M7853_d

Design of a 2-wire remote control
is very simple:

Connect input module IP 5502 to output module IP 5503 via a 2-wire line
adjust addresses and speed ... ready to go.

Application example

CANopen-application for greenhouses:
dependend on temperature- and humidity ventilation flap applications and
sprinkler systems for plants in a greenhouse.

MINIMASTER Output Module for CANopen IP 5503

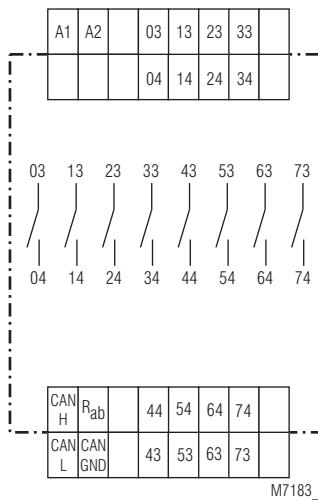

CANopen®

DOLD 

0243288

Circuit Diagram

IP 5503.28

- According to IEC/EN 61 131-2, IEC/EN 50 178
- CANopen interface according to DS301 version 3.0 (Plug and Play selectable), as option with galvanic separation
- 8 relay outputs
- LED indicators for supply voltage, Bus status and state of contact
- 70 mm width

Additional Information

- Datasheet Emergency Off Monitor BH 5922
- Datasheet MINIMASTER IL 5504, IN 5504
- Datasheet Power Supply IR 5592
- Datasheet Analogue Input Module IL 5508
- Datasheet Analogue Output Module IL 5507

Approvals and Markings

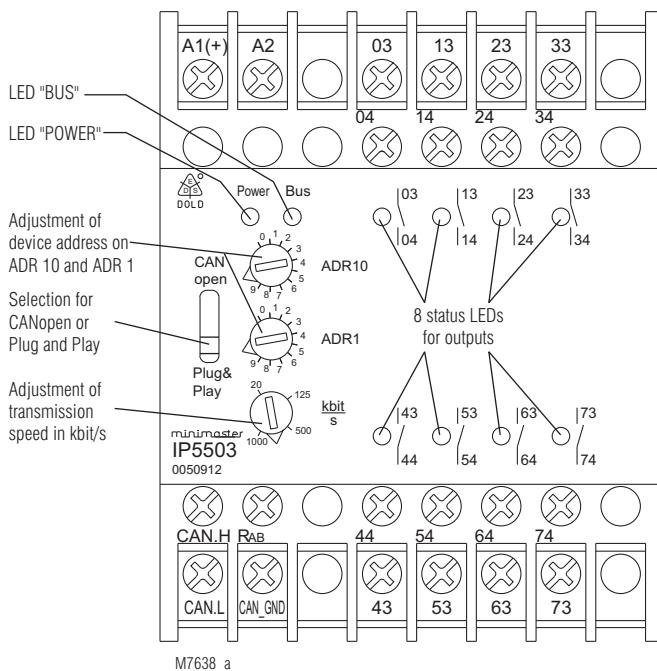

Application

The digital output module actuates signals in control circuits. The modul is used in industrial control circuits and building automation.

Indicators

- yellow LED „Power“: on, when supply connected
 yellow LED „BUS“: on, when bus is active
 red LEDs: on, when output relay is active (8 LEDs)

Setting and Adjustment

CANopen operation

With switch in position "CANopen" the CAN bus runs the CANopen protocol. The configuration is made with the programming software PN 5501 in conjunction with minimaster IL 5504 / IN 5504 or e.g. with ProCANopen. The corresponding configuration file on CD can be ordered under order no. PN 5501, article no. 0052860

Plug and Play operation

With switch in position "Plug and Play" the CANopen bus runs a variant fo the CANopen protocol and allows only to operate Dold modules that have this feature. If a system is configured in Plug and Play operation, it can be altered to CANopen at any time.

Address setting in Plug and Play mode

To allow the input module to communicate via CAN bus with a corresponding device, the address has to be adjusted on the 2 rotational switches on the front see below: The addresses 1 ... 49 and 51 ... 99 can be chosen. In Plug and Play mode the addresses 0 and 50 do not exist.

Input module IP 5502 with address	transmits to	Output module IP 5503 with address
1	→	51
.	.	.
49	→	99

Example of setting:
 Upper rotational switch "ADR 10": address 14
 Lower rotational switch "ADR 1": in position 1
 Upper rotational switch "ADR 10": in position 4
 Lower rotational switch "ADR 1": address 14

Setting and Adjustment

Set-up procedure

- 1.) Connect device to CANopen-bus
- 2.) Terminate bus on both ends with bridge between CAN-H and R_{ab} on first and last module.
- 3.) Adjust transmission speed (e.g. 20 K bit / s)
- 4.) Adjust device addresses

Attention:

To allow transmission in Plug and Play mode, one of the input modules e.g. IP 5502 of the CAN-bus has to be set to address 1.

Input- / Output Module Digital, For Modbus UG 9460

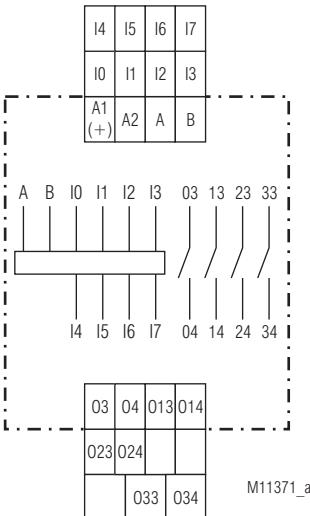

0275576

Product Description

The I/O module UG 9460 has 8 digital 24V inputs and 4 relay outputs. Via Modbus the inputs can be read and the outputs can be set individually.

Circuit Diagram

Connection Terminals

Terminal designation	Signal description
A1 (+)	Auxiliary voltage + DC 24 V
A2	Auxiliary voltage 0 V, inputs 0V
A	Modbus signal A
B	Modbus signal B
I ₀ ... I ₇	Digital inputs 0 ... 7
O3, O4	Relay outputs 0
O13, O14	Relay outputs 1
O23, O24	Relay outputs 2
O33, O34	Relay outputs 3

Your Advantages

- Widely used measuring and automation protocol
- Compact structure
- Easy installation
- Easy appliance
- Pluggable clamps
- TWIN- connection terminals to loop auxiliary supply and Bus

Features

- According to IEC/EN 61 131-2
- Modbus RTU-interface
- 8 digital inputs for DC 24 V
- 4 Relay outputs (3 x 8 A, 1 x 16 A)
- 3 potentiometer for setting the modbus adress and baud rate
- 15 LEDs for status indication
- Width: 22.5 mm

Approvals and Markings

Applications

The digital input modules collect signals of a control circuit from limit switches, push buttons, sensors etc. and can be read via Modbus and the outputs can be switched also via Modbus e.g. to activate actuators (e. g. contactors, valves etc.).

Indicators

- green LED "On": permanent on - supply connected
 red LED "ERR": flashing - Failure code of the device
 yellow LED "Bus": flashing - When receiving or transmitting Modbus data
 yellow status-LEDs "I₀ ... I₇": On, when input active
 yellow status-LEDs "O₀ ... O₃": On, when output relay active
 Failure code : 9 - Modbus communication failure
 9*) = Number of flashing pulses in sequence

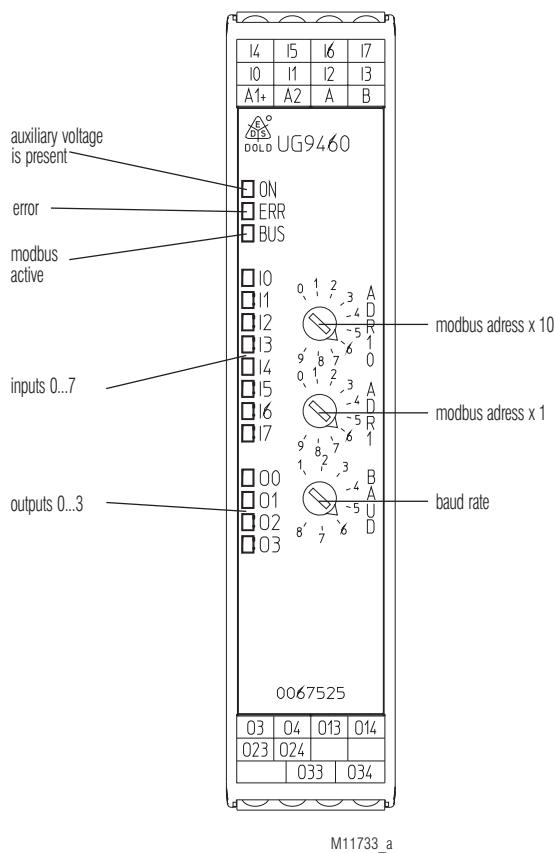

Reset Function

By sending a reset command a reset can be operated via Modbus

Modbus RTU

For communication between input / output module and a supervising control the Modbus RTU protocol according to Specification V 1.1b3 is used.

Characteristics

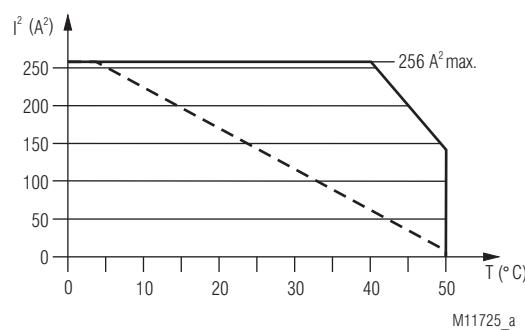

— device mounted on distance max. current at 50°C over contact path 03/04, 013/014, 023/024 = $3 \times (6A)^2 = 108A^2$

- - - device mounted without distance heated by devices with same load, max. current at 50°C over 3 contactrows 03/04, 013/014, 023/024 = $3 \times (1A)^2 = 3A^2$

$$\Sigma I^2 = I_1^2 + I_2^2 + I_3^2$$

I_1, I_2, I_3 - current in contactrows 03/04, 013/014, 023/024

— device mounted on distance max. current at 50°C over contact path 033/034 = $1 \times (12A)^2 = 144A^2$

- - - device mounted without distance heated by devices with same load, max. current at 50°C over contact path 033/034 = $1 \times (2A)^2 = 4A^2$

$$I^2 = I_4^2$$

I_4 - current in contactrow 033/034

Setting Facilities

Potentiometer ADR10: - Unit address x 10

Potentiometer ADR1: - Unit address x 1

Potentiometer BAUD: - Baud rate

The module address and baud rate is only read after connecting the auxiliary supply!

Setting and Adjustment

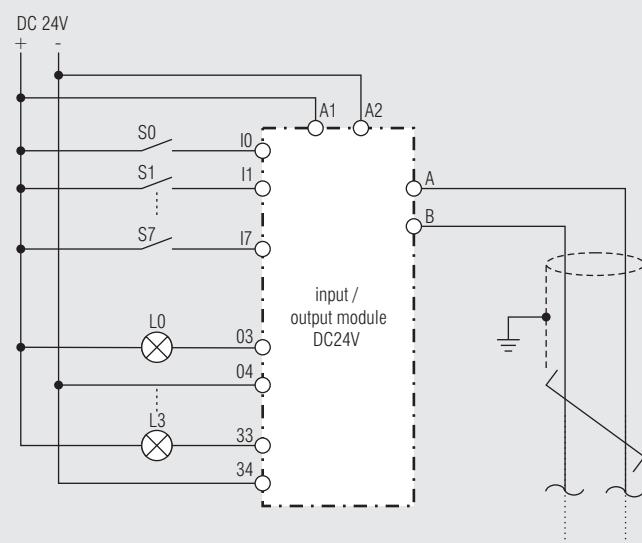

Set-up procedure

1. Connect device according to application example.
2. Setting unit address and Baud rate via potentiometer.
3. Power up the unit.

Safety Notes

- Never clear a fault when the device is switched on
- The user must ensure that the device and the necessary component are mounted and connected according to the locally applicable regulations and technical standards (VDE, TÜV, BG).
- Adjustments may only be carried out by qualified specialist staff and the applicable safety rules must be observed.
- Touch proof security is only provided when the power connection terminals are plugged into the unit.

Application Examples

Bus Interface

Protocol Modbus Seriell RTU

Adress 1 bis 99

Baudrate 1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200 Baud

Data bit 8

Stop bit 2

Parity none

More information about the interface, wiring rules, device identification and communication monitoring can be found in the Modbus user manual.

Function-Codes

At UG 9460 the following function codes are implemented:

Function-Codes	Name	Description
0x01	Read Single Coil	Outputs read individually
0x02	Read Discrete Inputs	Actual values read individually
0x03	Read Holding Register	Device parameter read word by word
0x04	Read Input Register	Actual values read word by word
0x05	Write Single Coil	Outputs write individually
0x06	Write Single Register	Device parameter write word by word
0x10	Write Multiple Register	Device parameter write in blocks

Parameter tables

Every slave owns an output- configuration- and actual value table. In these tables it is defined under which address the parameters can be found.

Input Register:

Register-Adresse	Protokoll-Adresse	Name	Value range	Description	Data type	Access rights
30001	0	State word 1 Device failure	0 ... 9	0: No failure 9: Communication fault Modbus	UINT16	read
30002	1	State word 2 State of device	0 ... 2	0: Device initialize 1: Device ready 2: Error mode	UINT16	read
30003	2	Inputs	0 ... 255	Bit 0 = Input 0 ... Bit 7 = Input 7	UINT16	read

Discrete Inputs:

Register-Adresse	Protokoll-Adresse	Name	Value range	Description	Data type	Access rights
10001	0	Input 0	0 ... 1	0: Input without voltage 1: Input with voltage	BIT	read
10002	1	Input 1	0 ... 1	0: Input without voltage 1: Input with voltage	BIT	read
10003	2	Input 2	0 ... 1	0: Input without voltage 1: Input with voltage	BIT	read
10004	3	Input 3	0 ... 1	0: Input without voltage 1: Input with voltage	BIT	read
10005	4	Input 4	0 ... 1	0: Input without voltage 1: Input with voltage	BIT	read
10006	5	Input 5	0 ... 1	0: Input without voltage 1: Input with voltage	BIT	read
10007	6	Input 6	0 ... 1	0: Input without voltage 1: Input with voltage	BIT	read
10008	7	Input 7	0 ... 1	0: Input without voltage 1: Input with voltage	BIT	read

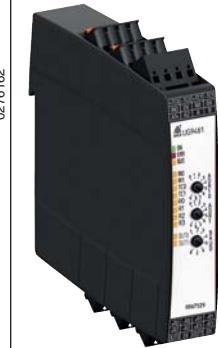

Discrete Output Coils:

Register-Adresse	Protokoll-Adresse	Name	Value range	Description	Data type	Access rights
1	0	Relay 0	0 ... 1	0: Relay Off 1: Relay On	BIT	write
2	1	Relay 1	0 ... 1	0: Relay Off 1: Relay On	BIT	write
3	2	Relay 2	0 ... 1	0: Relay Off 1: Relay On	BIT	write
4	3	Relay 3	0 ... 1	0: Relay Off 1: Relay On	BIT	write
5	4	Reset	0 ... 1	0: No function 1: Device reset	BIT	write

Output Holding Register

Register-Adresse	Protokoll-Adresse	Name	Value range	Description	Data type	Access rights
40001	0	Control word 1	0 ... 1	Bit 0 = Reset	UINT16	write / reading
40002	1	Control word 2	0 ... 15	Bit 0 : Relay 0 Bit 1 : Relay 1 Bit 2 : Relay 2 Bit 3 : Relay 3	UINT16	write / reading
40003	2	Timeout release	0 ... 1	0 = Disable 1 = Enable	UINT16	write / reading
40004	3	Timeout	0 ... 10000	Timeout value in ms	UINT16	write / reading

Input- / Output Module Analogue, For Modbus UG 9461

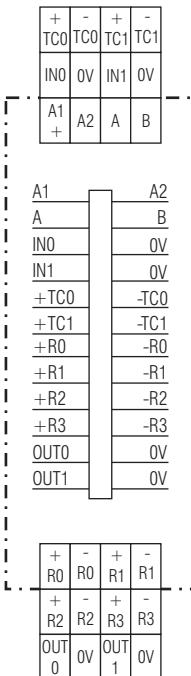

0276162

Product Description

The universal Input / Output module UG 9461 has analogue inputs and 2 analogue outputs. It can be used to connect thermocouples and thermistors and offers 2 configurable measuring inputs 0-10V or 0-20mA. Via Modbus the input status can be read and the output status can be set. For the analogue outputs a DC 01 ... 10 V interface is available.

Circuit Diagram

Connection Terminals

Terminal designation	Signal description
A1 (+)	Auxiliary voltage + DC 24 V
A2	Auxiliary voltage 0 V

Your Advantages

- Widely used measuring and automation protocol
- Compact structure
- Easy installation
- Easy appliance
- Pluggable clamps
- TWIN- connection terminals to loop auxiliary supply and Bus

Features

- According to IEC/EN 61 131-2
- Modbus RTU-interface
- 2 configurable analogue inputs: 0 ... 10 V, 0... 20 mA
- 2 K-Thermal element inputs
- 4 Thermistor inputs for Pt1000 sensors
- 2 Analogue outputs: 0 ... 10 V
- 3 potentiometer for setting the modbus adress and baud rate
- 13 LEDs for status indication
- Width: 22.5 mm

Approvals and Markings

Applications

The universal Input / Output module UG 9461 is used to collect Temperature and other analogue values. Via the analogue outputs voltage signals of DC 0 ... 10 V can be offered to be used in connected systems. The analogue outputs are partly configurable.

Indicators

- | | |
|---|--|
| green LED "On": permanent on - supply connected | |
| red LED "ERR": flashing | - Failure code of the device |
| yellow LED "Bus": flashing | - When receiving or transmitting Modbus data |
| yellow status-LEDs "IN ₀ IN ₁ , TC ₀ TC ₁ , R ₀ R ₁ , R ₂ R ₃ , OUT ₀ OUT ₁ " : | On , when on a connected analogue input or output a valid signal is available. |
| Failure code : | 9 - Modbus communication failure
10 - Checksum failure EEPROM |
- 9*) - 10*) = Number of flashing pulses in sequence

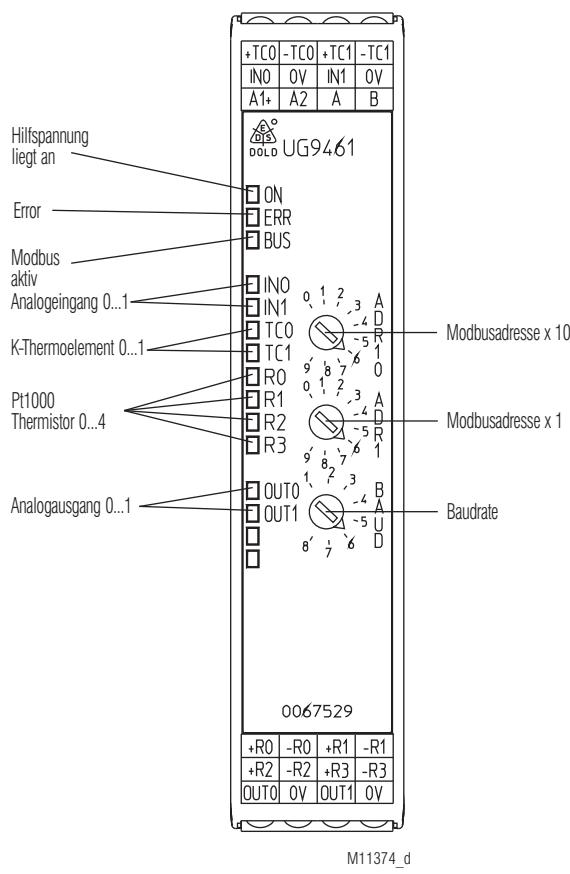

Reset Function

By sending a reset command a reset can be operated via Modbus

Modbus RTU

For communication between input / output module and a supervising control the Modbus RTU protocol according to Specification V 1.1b3 is used.

Setting

Technical Data

Removable terminal blocks

Relay connection 8 A

pluggable cage clamp
terminals (PC): 0.25 ... 1.5 mm² solid or
0.25 ... 1.5 mm² stranded wire with sleeve

Insulation of wires or
sleeve length: 12 mm

Relay connection 16 A

pluggable screw terminal (S): 0.25 ... 2.5 mm² solid or
0.25 ... 2.5 mm² stranded ferruled

Insulation of wires or
sleeve length: 8 mm

Wire connection:

Bus and auxiliary supply
pluggable Twin-cage-clamp-
terminal (PT): 0.25 ... 1.5 mm² solid or
0.25 ... 1.5 mm² stranded ferruled

Insulation of wires or
sleeve length: 8 mm

Fixing torque: 0.5 ... 0.6 Nm

Mounting: DIN rail IEC/EN 60 715

Weight: 220 g

Dimensions

Width x height x depth: 22.5 x 105 x 120.3 mm

Standard Type

UG 9461PM DC 24 V 8 AI/2 AO
Article number: 0067529

- with Modbus RTU interface
- 8 analogue inputs
- 2 analogue outputs
- Auxiliary voltage U_H: DC 24 V
- Baubreite: 22.5 mm

Setting Facilities

Potentiometer ADR10: - Unit address x 10

Potentiometer ADR1: - Unit address x 1

Potentiometer BAUD: - Baud rate

The module address and baud rate is only read after connecting the auxiliary supply!

Setting and Adjustment

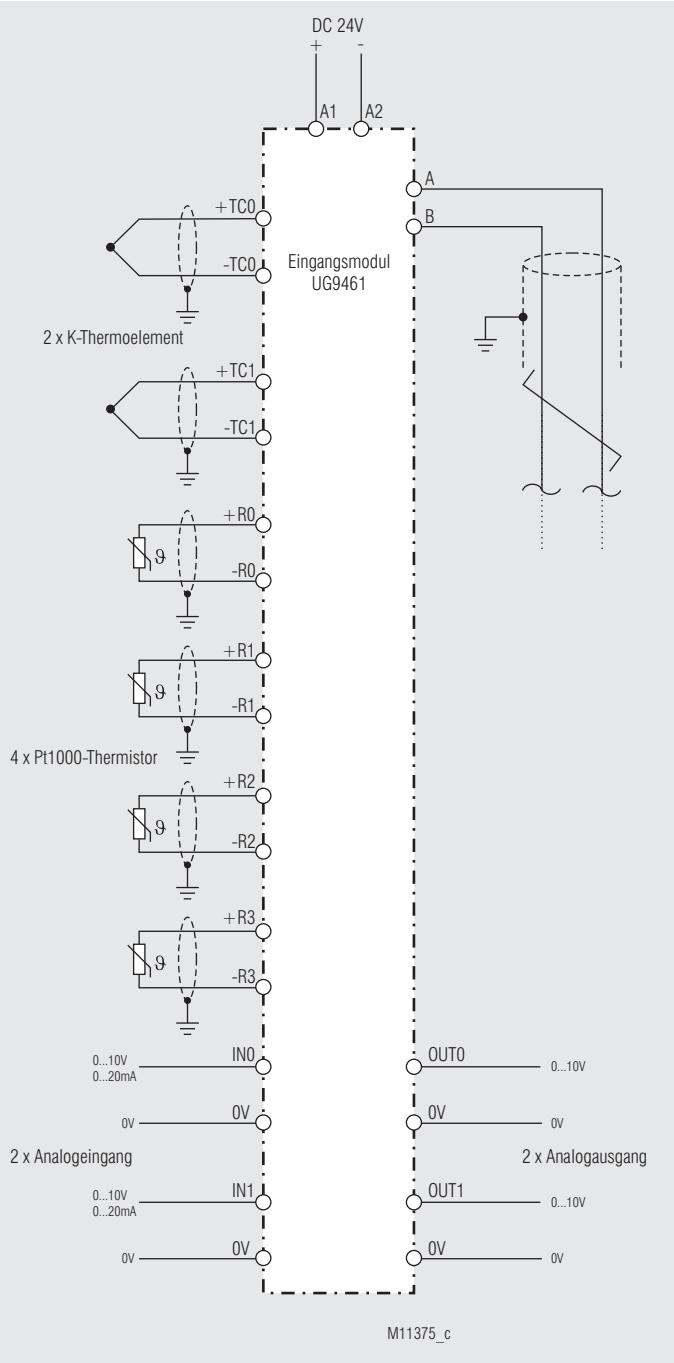

Set-up procedure

1. Connect device according to application example.
2. Setting unit address and Baud rate via potentiometer.
3. Power up the unit.
4. Parametrization via Modbus.

Safety Notes

- Never clear a fault when the device is switched on
- The user must ensure that the device and the necessary component are mounted and connected according to the locally applicable regulations and technical standards (VDE, TÜV,BG).
- Adjustments may only be carried out by qualified specialist staff and the applicable safety rules must be observed.
- Touch proof security is only provided when the power connection terminals are plugged into the unit.

Application Examples

M11375_c

Bus Interface

Protocol	Modbus Seriell RTU
Adress	1 bis 99
Baudrate	1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200 Baud
Data bit	8
Stop bit	2
Parity	none

More information about the interface, wiring rules, device identification and communication monitoring can be found in the Modbus user manual.

Function-Codes

At UG 9461 the following function codes are implemented:

Function-Codes	Name	Beschreibung
0x03	Read Holding Register	Device parameter read word by word
0x04	Read Input Register	Actual values read word by word
0x05	Write Single Coil	Outputs write individually
0x06	Write Single Register	Device parameter write word by word
0x10	Write Multiple Register	Device parameter write in blocks

Device configuration

If required the device configuration data can be saved permanently by setting the Bit "WriteKonfig to EEPROM". The data is copied from the EEPROM to the relevant register when connecting the auxiliary voltage. As the numbers of write cycles of an EEPROM are limited, the writing must not be done in cycles. In addition it is not possible to receive modbus telegrams during a period of 50 ms while writing the EEPROM.

Parameter tables

Every slave owns an output- configuration- and actual value table. In these tables it is defined under which address the parameters can be found.

Single Coils (Control signals):

Register-Adresse	Protokoll-Adresse	Name	Value range	Description	Data type	Access rights
1	0	Reset	0x0000 0xFF00	0: No function 1: Device reset	BIT	write
2	1	WriteKonfig to EEPROM	0x0000 0xFF00	0: No function 1: Save parameter	BIT	write

Holding Register:

Register-Adresse	Protokoll-Adresse	Name	Value range	Description	Data type	Access rights
40001	0	Control word 1	0 ... 2	Bit 0 = Reset Bit 1 = WriteKonfig to EEPROM	UINT16	write / reading
40002	1	Analogue input 0 configure	0 ... 1	*) 0 = 0 ... 10 V 1 = 0 ... 20 mA	UINT16	write / reading
40003	2	Analogue input 1 configure	0 ... 1	*) 0 = 0 ... 10 V 1 = 0 ... 20 mA	UINT16	write / reading
40004	3	Analogue output	0 ... 10000	Voltage in mV	UINT16	write / reading
40005	4	Analogue output1	0 ... 10000	Voltage in mV	UINT16	write / reading
40006	5	Timeout release	0 ... 1	0 = Disable 1 = Enable	UINT16	write / reading
40007	6	Timeout	0 ... 10000	Timeout value in ms	UINT16	write / reading

*) Parameters can be stored permanently in the EEPROM by setting the Bit "WriteKonfig to EEPROM"

Parameter tables

Input Register (Gerätestatus- und Messwerte):

Register-Adresse	Protokoll-Adresse	Name	Value range	Description	Data type	Access rights
30001	0	State word 1 Device failure	0 ... 10	0: No failure 7: Temperatur circuit fault 9: Communication fault Modbus 10: Checksum failure EEPROM	INT16	read
30002	1	State word 2 Device state	0 ... 2	0: Device initialize 1: Device ready 2: Error mode	INT16	read
30003	2	Analogue input 0	0 ... 10000 0 ... 20000	mV uA	INT16	read
30004	3	Analogue input	0 ... 10000 0 ... 20000	mV uA	INT16	read
30005	4	Thermal element0	-1800 ... 14000	1/10°C	INT16	read
30006	5	Thermal element1	-1800 ... 14000	1/10°C	INT16	read
30007	6	Thermistor0	-500 ... 2000	1/10°C	INT16	read
30008	7	Thermistor1	-500 ... 2000	1/10°C	INT16	read
30009	8	Thermistor2	-500 ... 2000	1/10°C	INT16	read
30010	9	Thermistor3	-500 ... 2000	1/10°C	INT16	read
30011	10	Sensor state	0 ... 255	Bit0 =1, Eingang IN0 o.k. Bit1 =1, Eingang IN1 o.k. Bit2 =1, Sensor TC0 o.k. Bit3 =1, Sensor TC1 o.k. Bit4 =1, Sensor RTD0 o.k. Bit5 =1, Sensor RTD1 o.k. Bit6 =1, Sensor RTD2 o.k. Bit7 =1, Sensor RTD3 o.k.	INT16	read

IK 5121/003	to protect of 3 contacts
IK 5121/004	to protect of 4 contacts

Approvals and Markings

Applications

The protective diode module IK 5121 is used to protect contacts when switching inductances.

Technical Data

Nominal voltage U_N :	DC 24 V
Voltage range:	0.85 ... 1.15 U_N
Input current:	approx. 5 mA / Input at U_N
Max. freewheel current:	30 A for 1 ms

General Data

Operating mode:	Continuous operation
Temperature range:	- 20 ... + 65 °C
Clearance and creepage distances	
Rated impulse voltage / pollution degree:	4 kV / 2 DIN VDE 0110-1 (04.97)
EMC	
Electrostatic discharge:	8 kV (contact) IEC/EN 61 000-4-2 (according to test degree 3)
HF irradiation:	10 V / m IEC/EN 61 000-4-3
Fast transients:	2 kV IEC/EN 61 000-4-4
Surge voltages between wire and ground:	2 kV IEC/EN 61 000-4-5
HF wire guided:	10 V IEC/EN 61 000-4-6
Interference suppression:	Limit value class B EN 55 011

Degree of protection

Housing:	IP 40 IEC/EN 60 529
Terminals:	IP 20 IEC/EN 60 529
Housing:	

Thermoplastic with V0 behaviour according to UL Subj. 94
Amplitude 0,35 mm

frequency 10 ... 55 Hz, IEC/EN 60 068-2-6
EN 50 005

2 x 2.5 mm ² solid or
2 x 1.5 mm ² stranded wire with sleeve DIN 46 228-1/-2/-3/-4

Flat terminals with self-lifting clamping piece

Accessories

Diode Module UG 5122

0270971

UG 5122/004

UG 5122/008

Your Advantages

- Protects up to 8 contacts when switching inductive DC loads
- High dielectric strength
- Ready for mounting in switching cabinets
- Pluggable clamps allow a fast module change
- Unique design with UG- switching devices

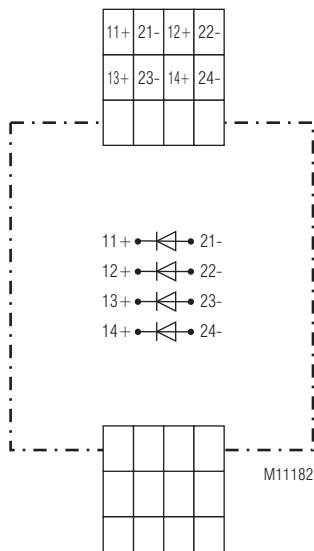

Features

- Pluggable terminal block with screw terminals
- Width: 22.5 mm

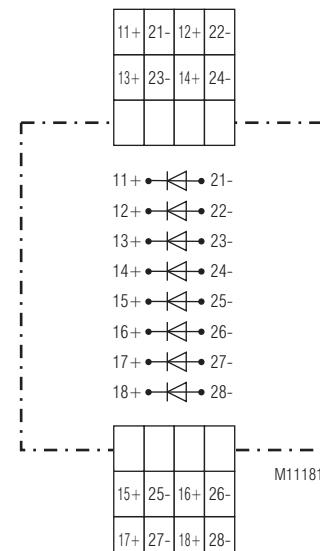

Product Description

The diode module UG 5122 has 4 or 8 free wheeling diodes. Via pluggable connecting clamps they could be integrated easily in DC- loads. So the diode module offers a simple contact protection when switching inductivities at DC- loads.

Circuit Diagrams

UG 5122/004

UG 5122/008

Approvals and Markings

Application

The diode module UG 5122 is using to protect contacts when switching inductive DC loads.

Safety notes

A correct polarity has to be observed!

Technical Data

Technology	Avalanche - Diode
Repetitive peak reverse voltage [V _{RRM}]	max. 1600 V
Forward current, medium [I _{(AV)M}]	max. 1 A
Surge forward current [I _{FSM}]	120 A (10 ms)
Forward voltage drop [V _F]	max. 1.25 V (I _F = 7 A)
Reverse leakage current [I _R]	max. 2 mA (T _A = 180 °C)

General Data

Nominal operating mode:	continuous operation	
Temperature range:	- 40 ... + 80°C

Resistor Module UG 5123

0270973

Product Description

The resistor module UG 5123 is generally equipped with a $47 \text{ k}\Omega$ resistor. Via pluggable clamps it can be integrated easily in switching plants.

Your Advantages

- Ready for mounting in switching cabinets
- Pluggable clamps allow a fast module change
- Unique design with UG- switching devices

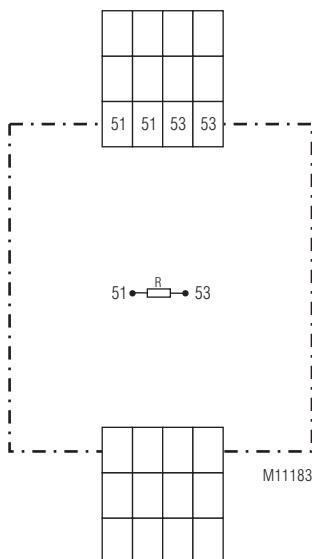

Features

- Load resistor
- Pluggable terminal block with screw terminals
- Width: 22,5 mm

Approvals and Markings

Circuit Diagram

Application

General load resistance, e.g. for lowering of rest voltages of capacitive aperture or as voltage divider when using different resistor modules.

The image shows a large grid of light gray dotted lines on a white background, designed for drawing or plotting data. The grid consists of horizontal rows and vertical columns of dots, creating a pattern of small squares. To the right of the grid, there is a vertical column of six blank, lined pages, each featuring a set of horizontal lines for writing.
